# Summary of new meshes for AutoCFD-5

- Redistribution of refinement zones aimed at:
  - Further refinement of surface curvatures
  - Further refinement of important flow regions
  - Coarsening of unnecessarily refined areas
  - Use of fewer Size Boxes and rely more on Surface Offset and Sweep rules
- Reduction of total number of layers from 7 to 5
- Minor PID name modifications and addition of one new PID (please check your previous CFD setups)
- Overall ~22% reduction in cell count
- Better quality criteria for more CFD solvers

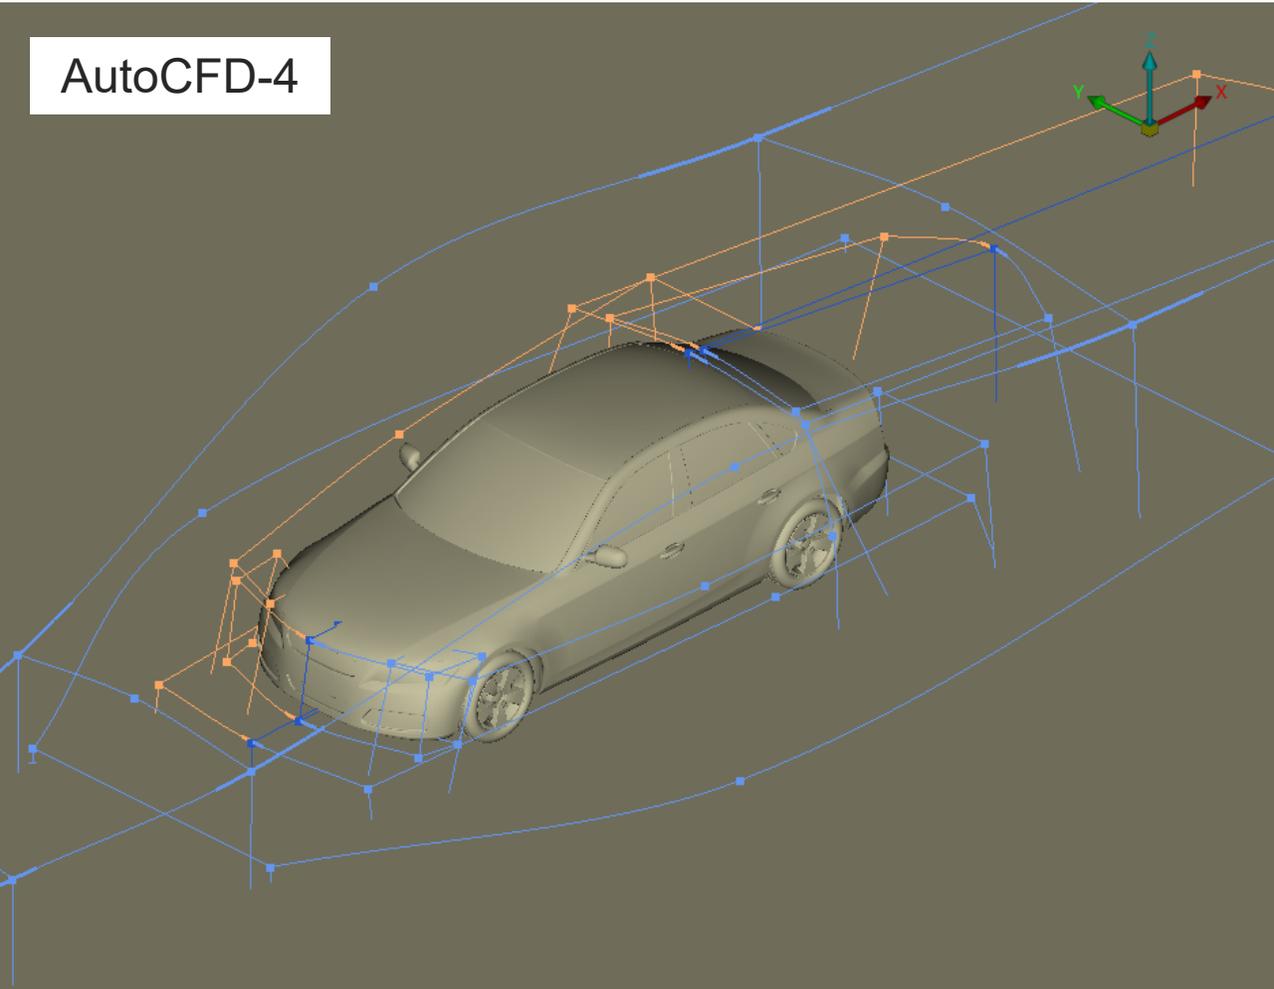

# Summary of new meshes for AutoCFD-5

	AutoCFD-4 (ANSA v24.1.3)		AutoCFD-5 (ANSA 2025.2.0)	
	Case 2a Notchback	Case 2b (deflector) Notchback	Case 2a Notchback	Case 2b (deflector) Notchback
Number of shell elements (million)	11.2	11.3	<b>10.3</b>	<b>10.4</b>
Number of vol elements (million)	157	158	<b>123</b>	<b>126</b>
First layer height (mm)	0.75		<b>0.75</b>	
Number of viscous layers	7		<b>5</b>	
Growth rate	1.2 – 1.4 variable		<b>1.2 – 1.4 variable</b>	

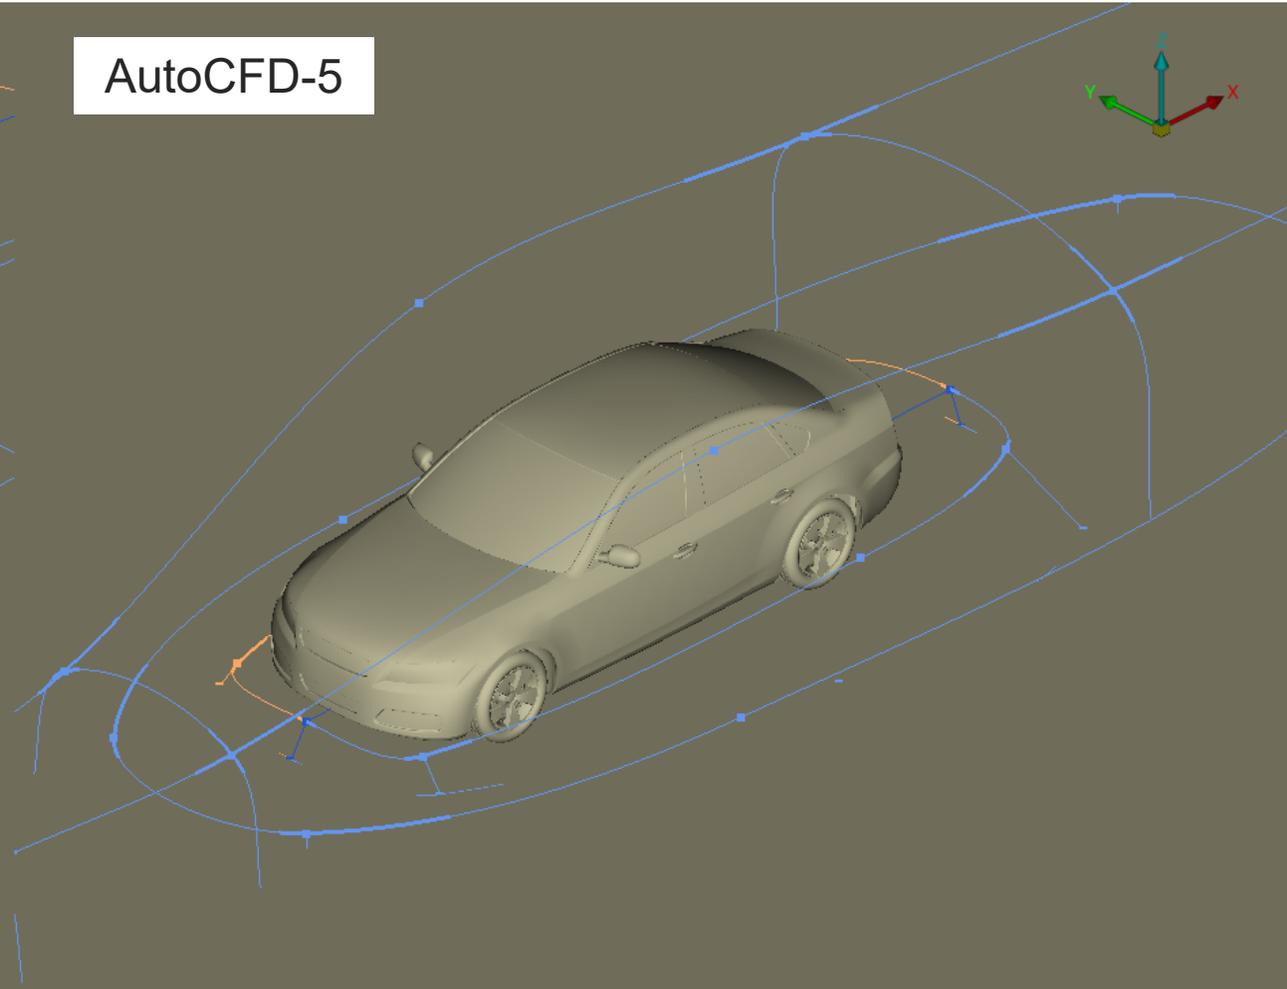

Speed: ~30min on AMD Ryzen  
threadripper PRO 9995WX – 96 cores

# Simplification of Size Boxes

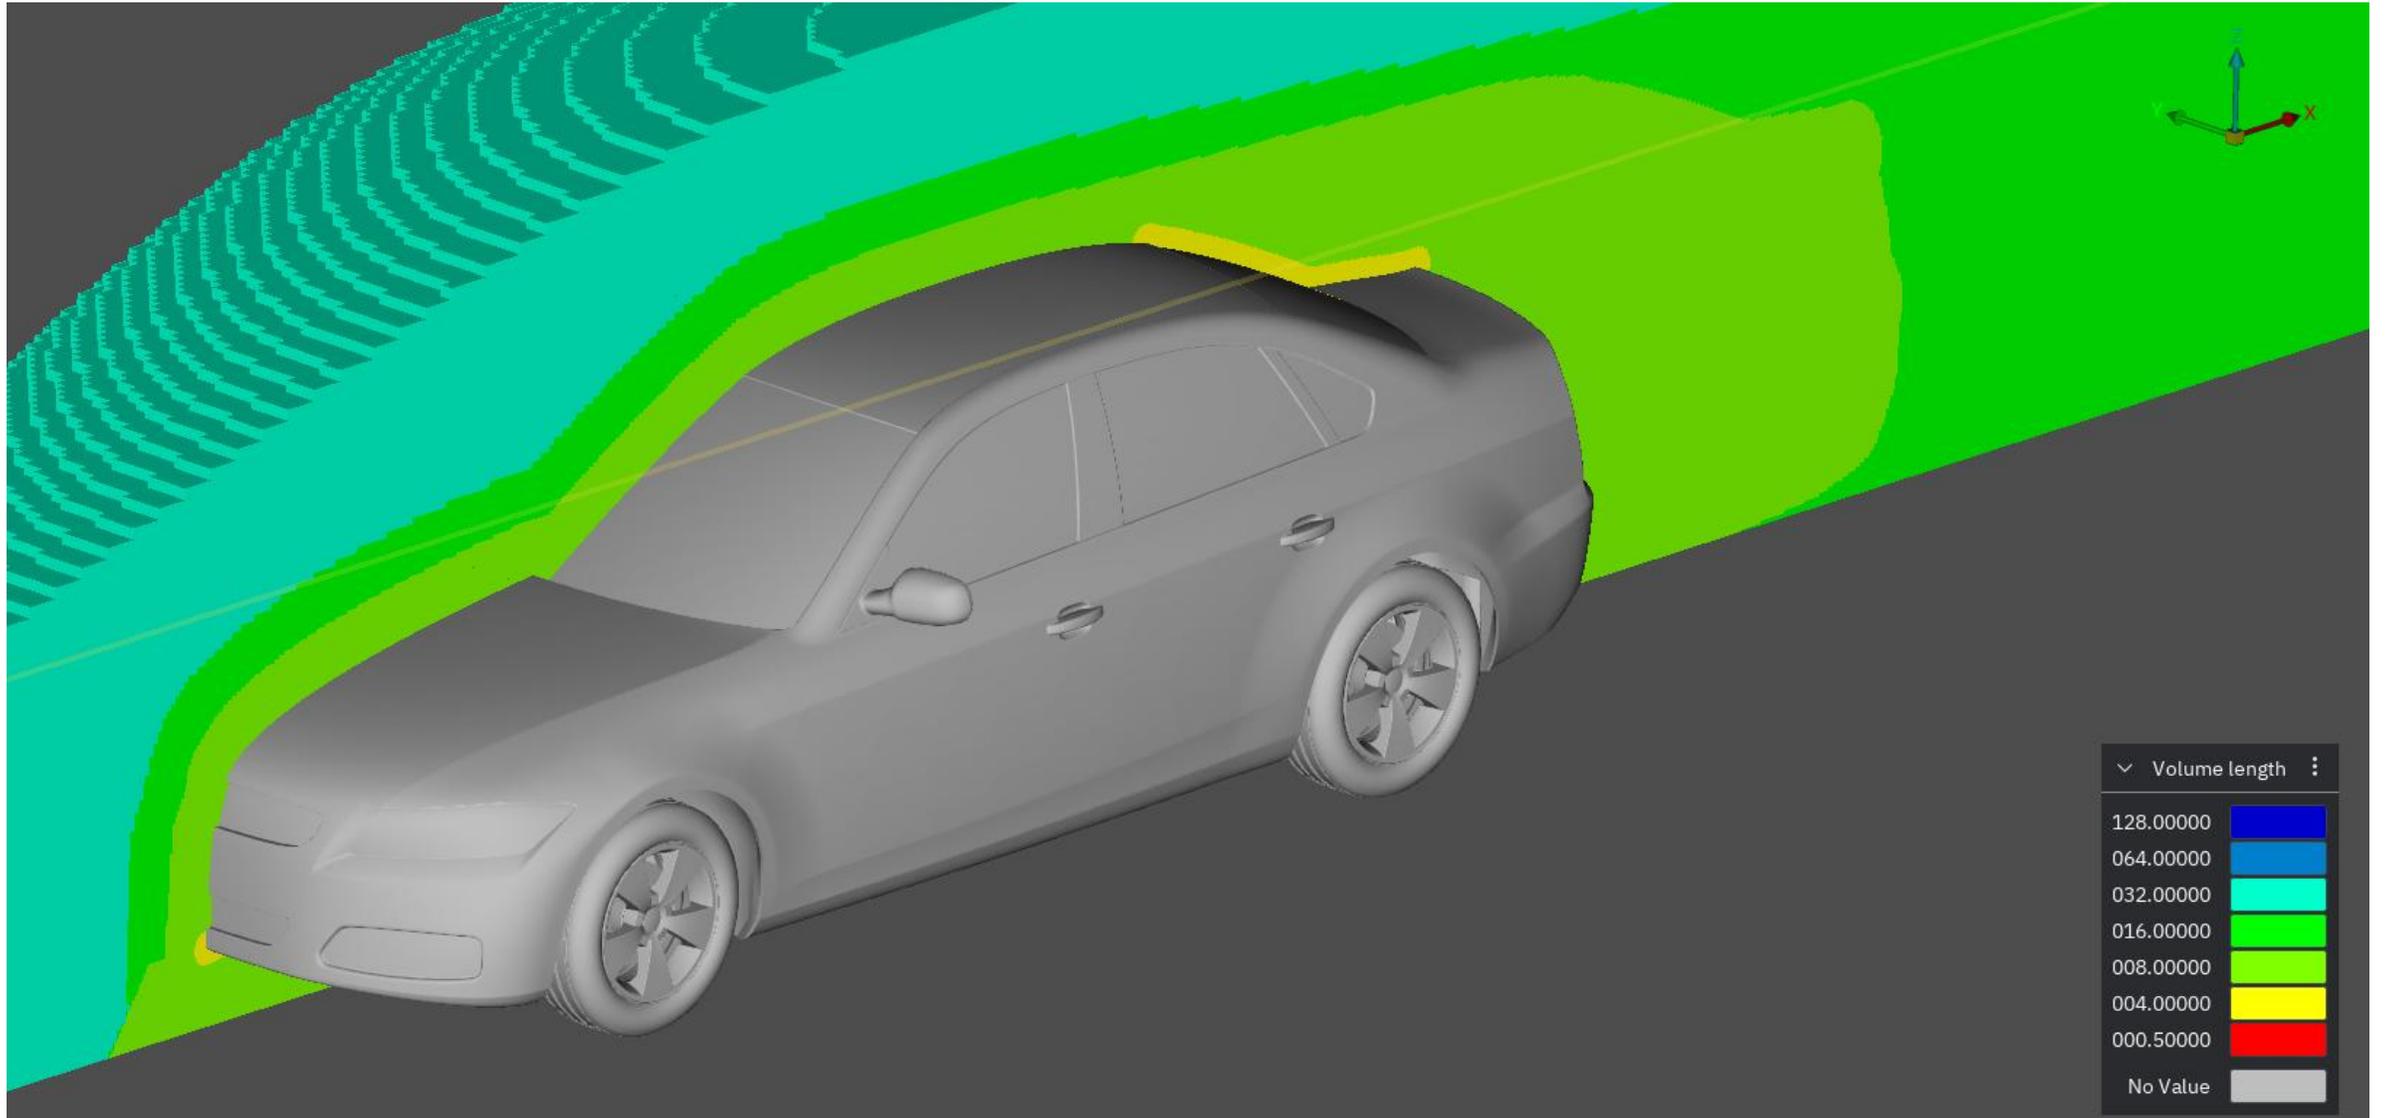

AutoCFD-4

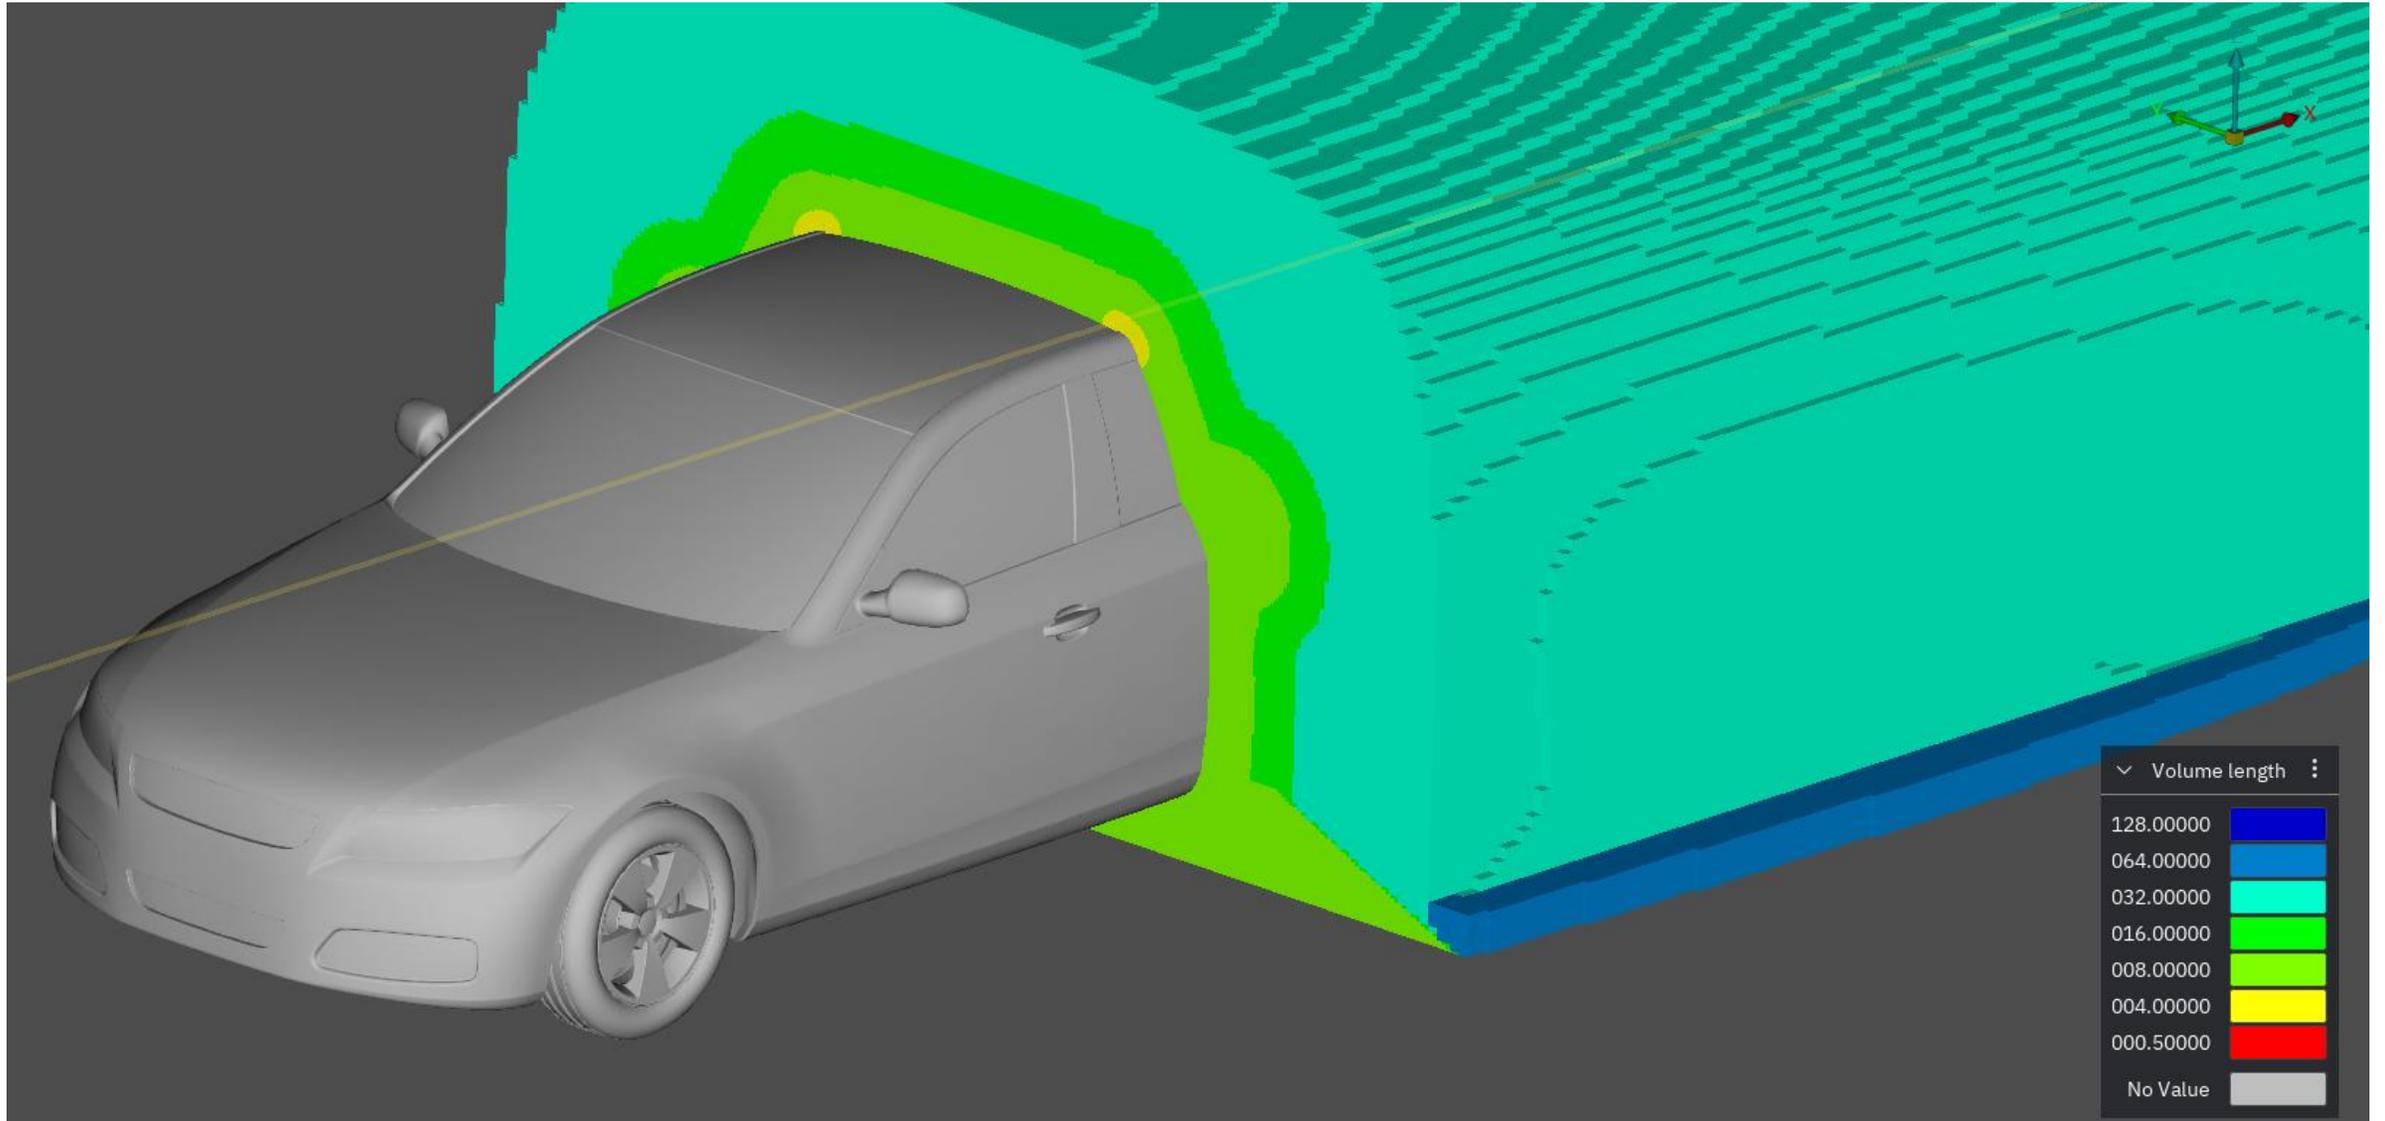

AutoCFD-5

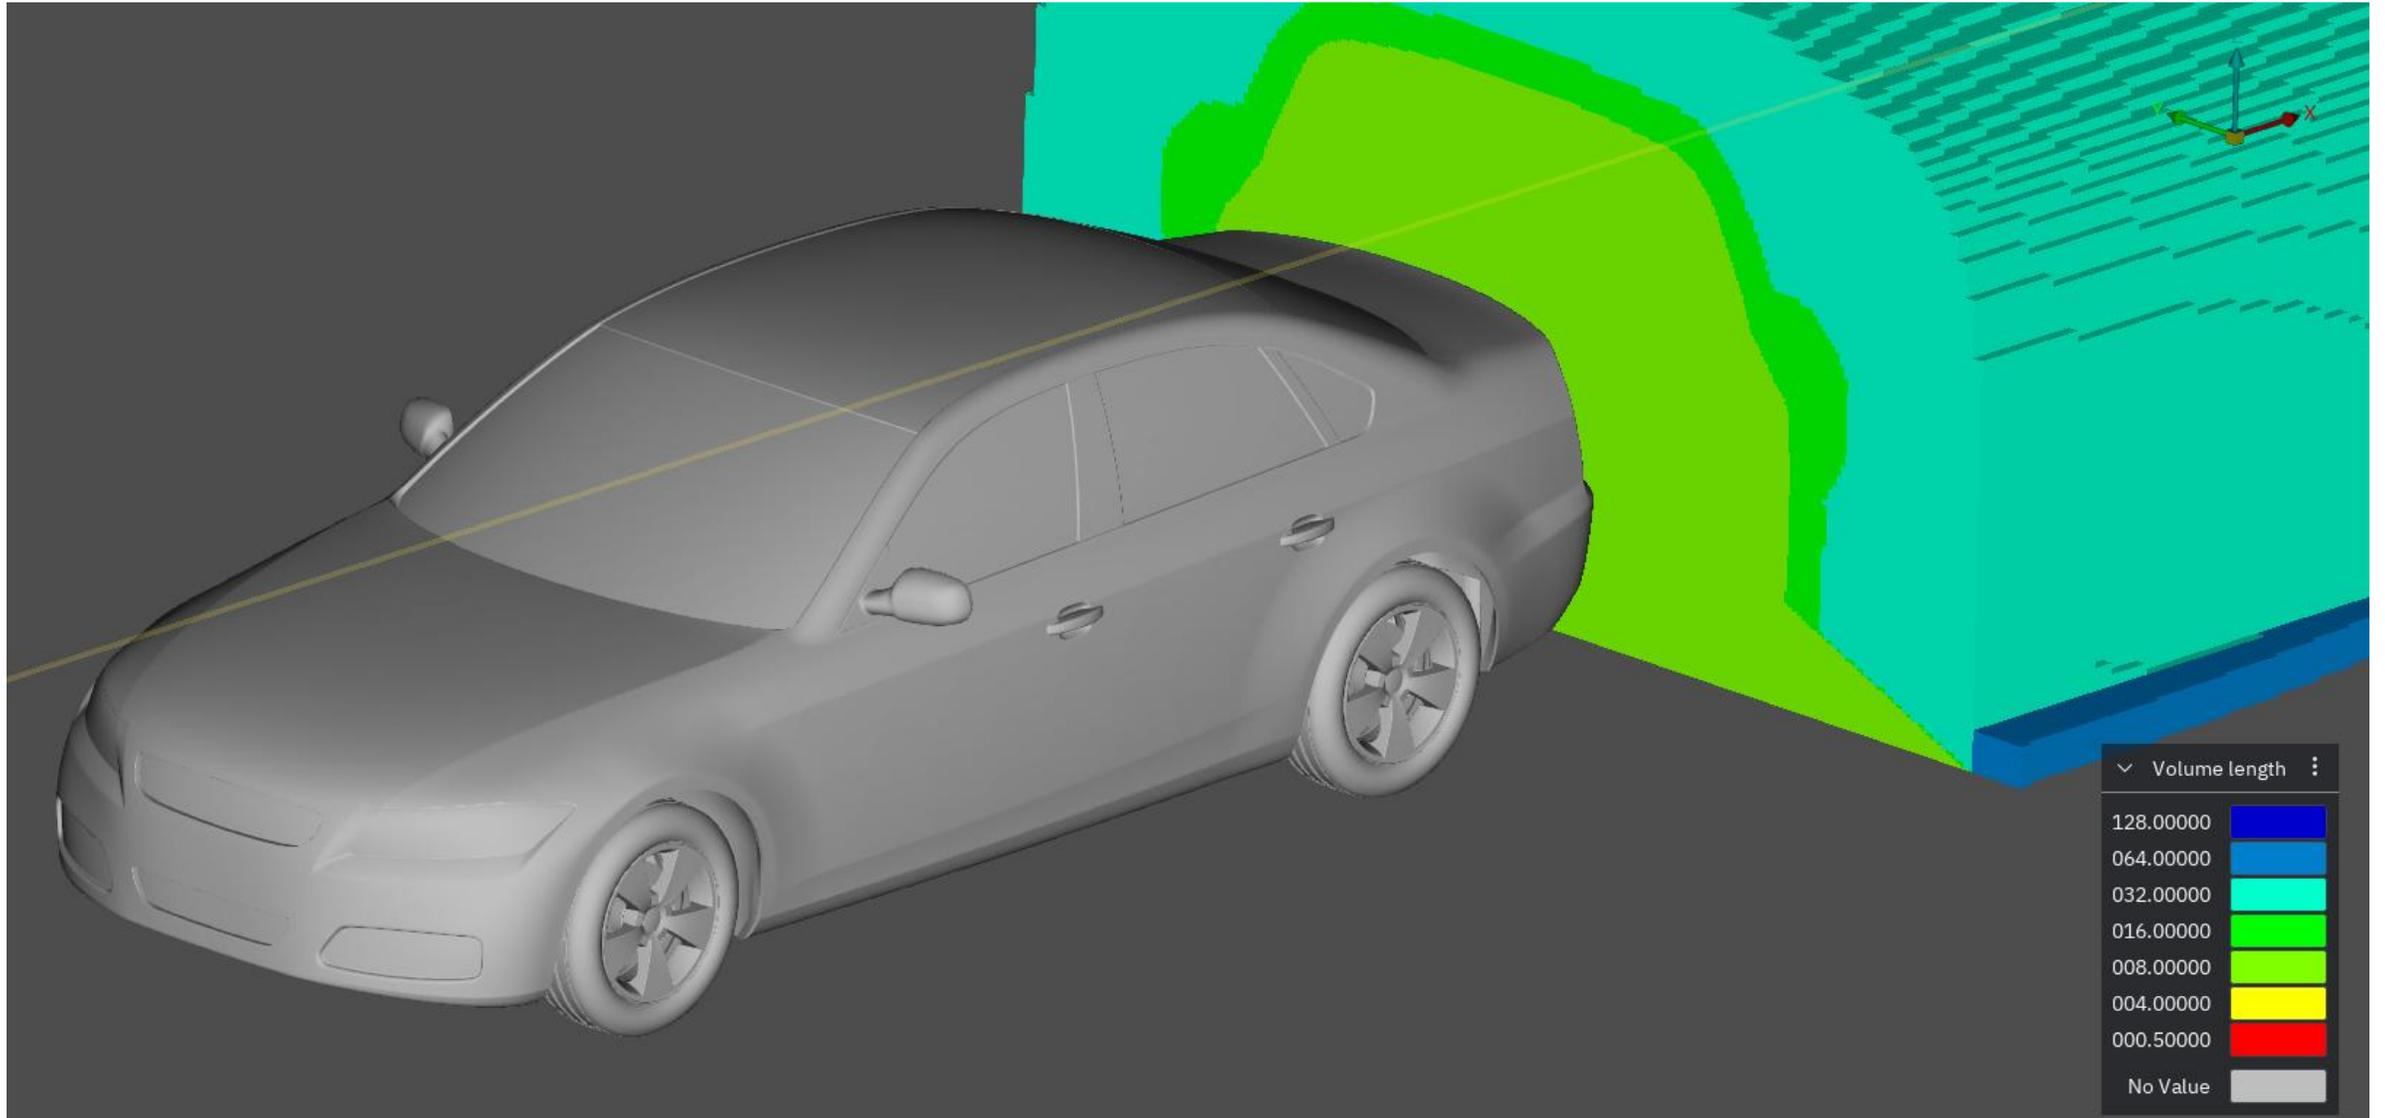

# New setup relies more on Surface Offset and sweep size rules

# New setup relies more on Surface Offset and sweep size rules

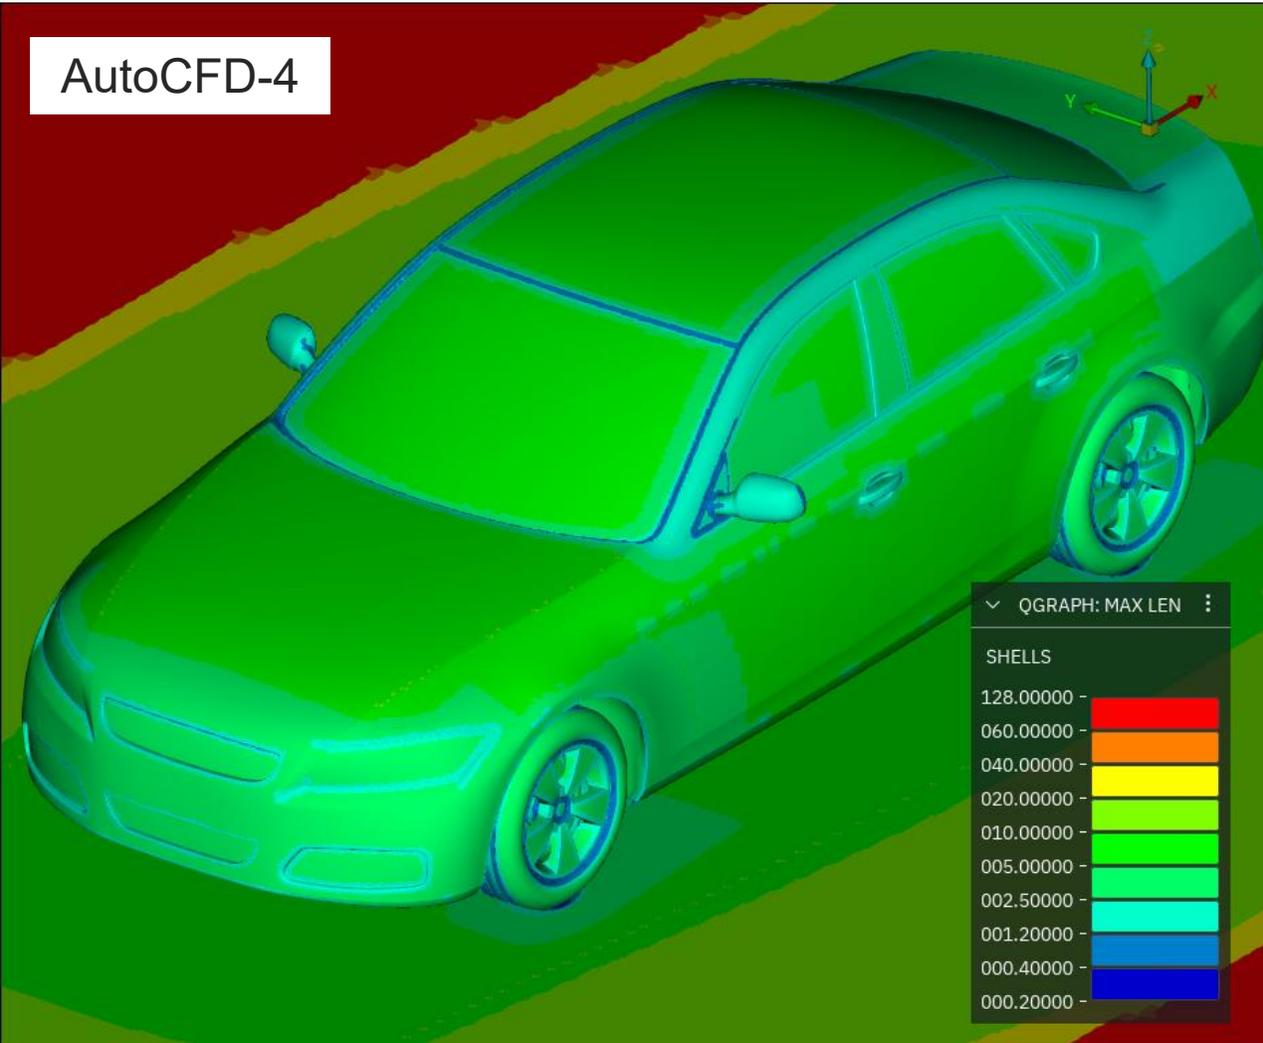

# New setup relies more on Surface Offset and sweep size rules

# Volume mesh at front wheel axis

# Volume mesh – Size Boxes replaced by Surface Offset size rules

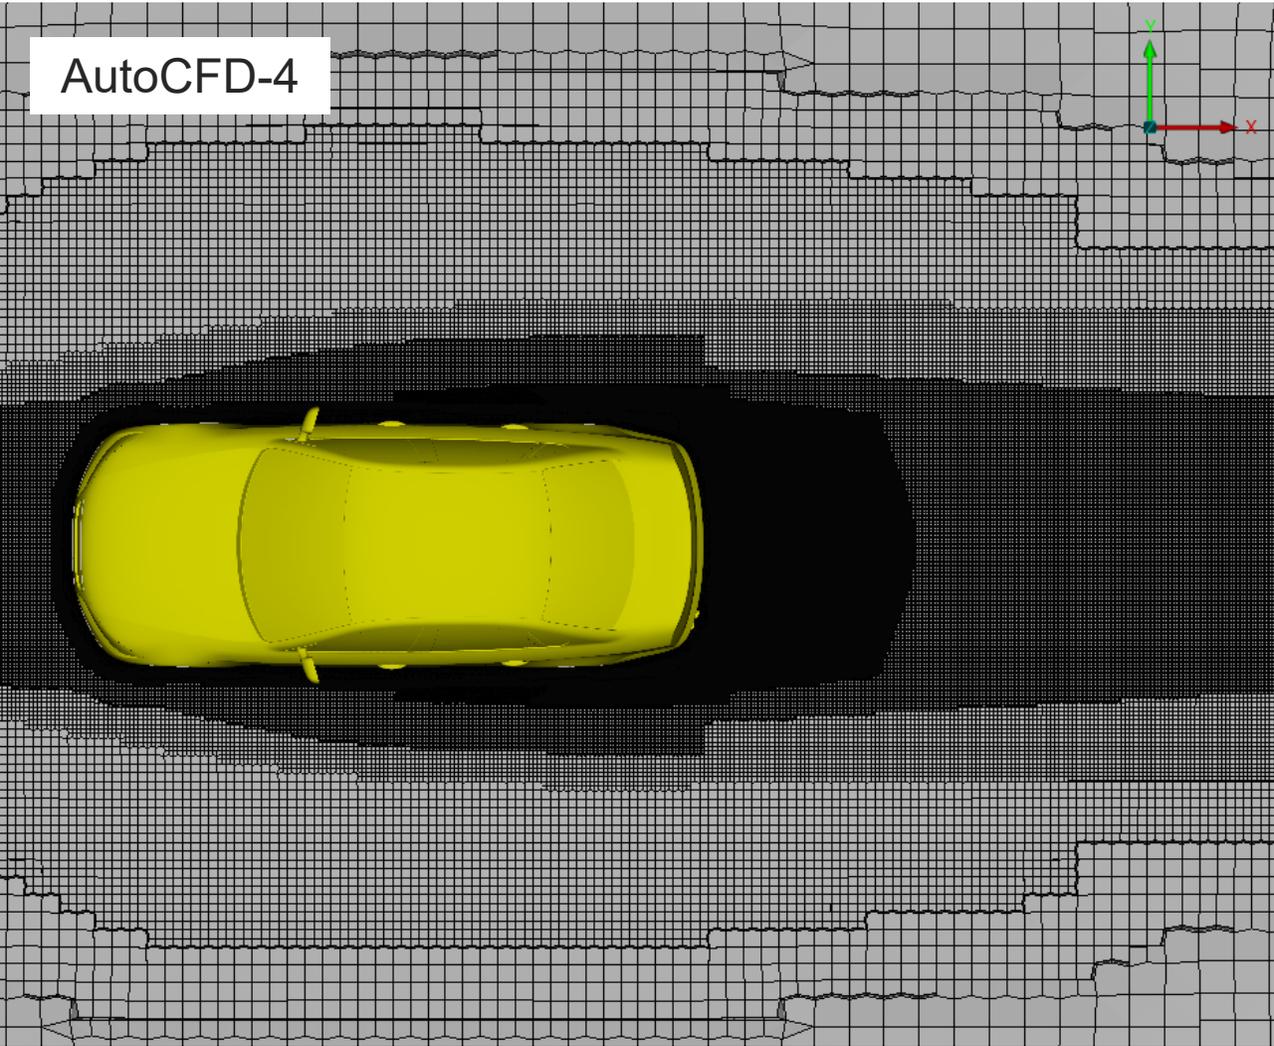

# Volume mesh – Size Boxes replaced by Surface Offset size rules

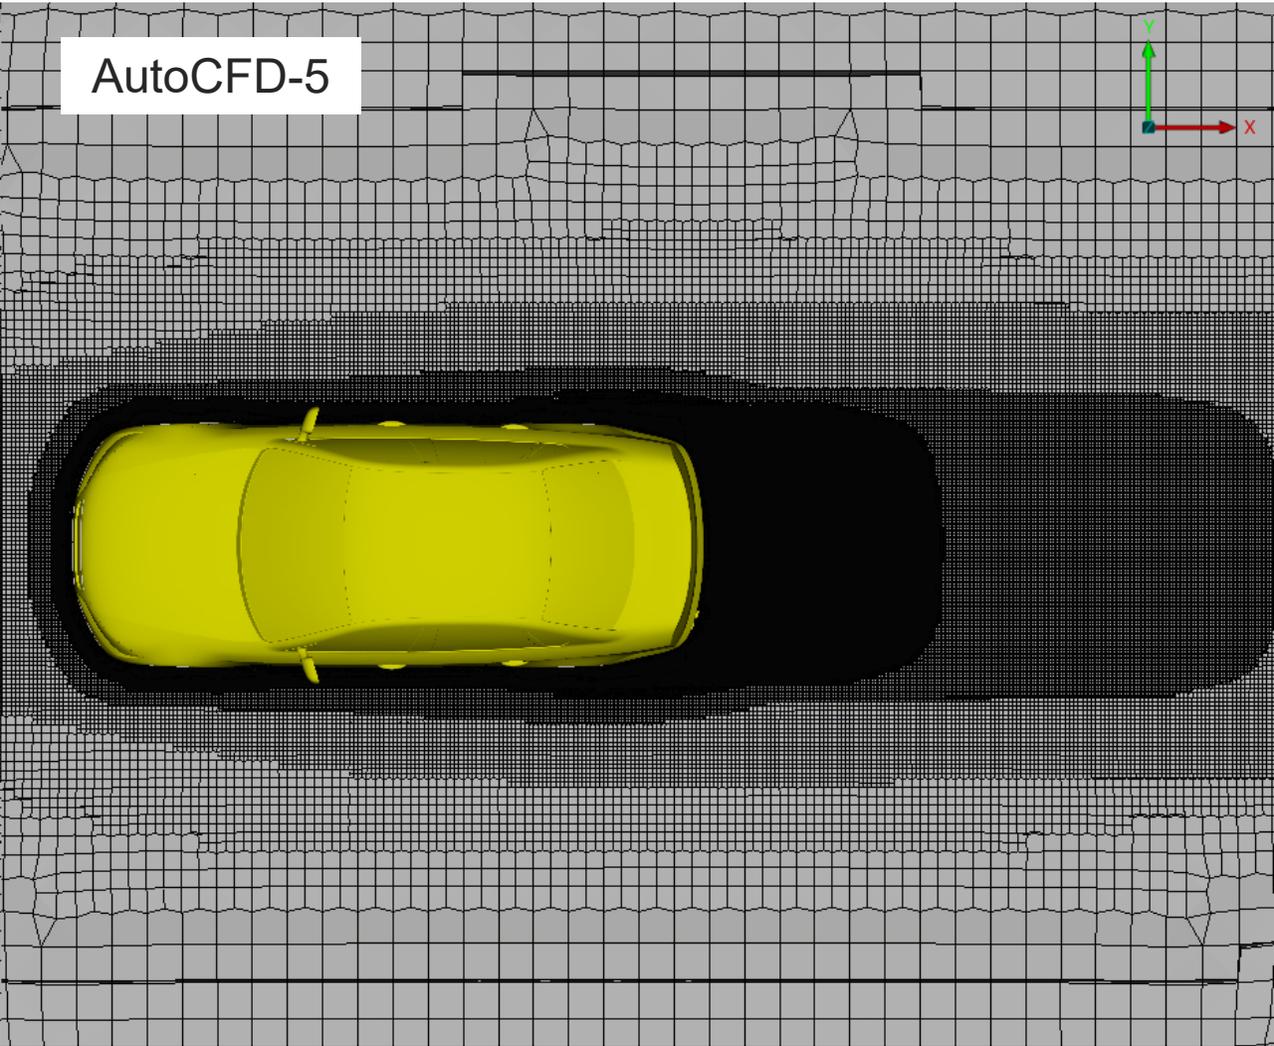

# Volume mesh – Size Boxes replaced by Surface Offset size rules

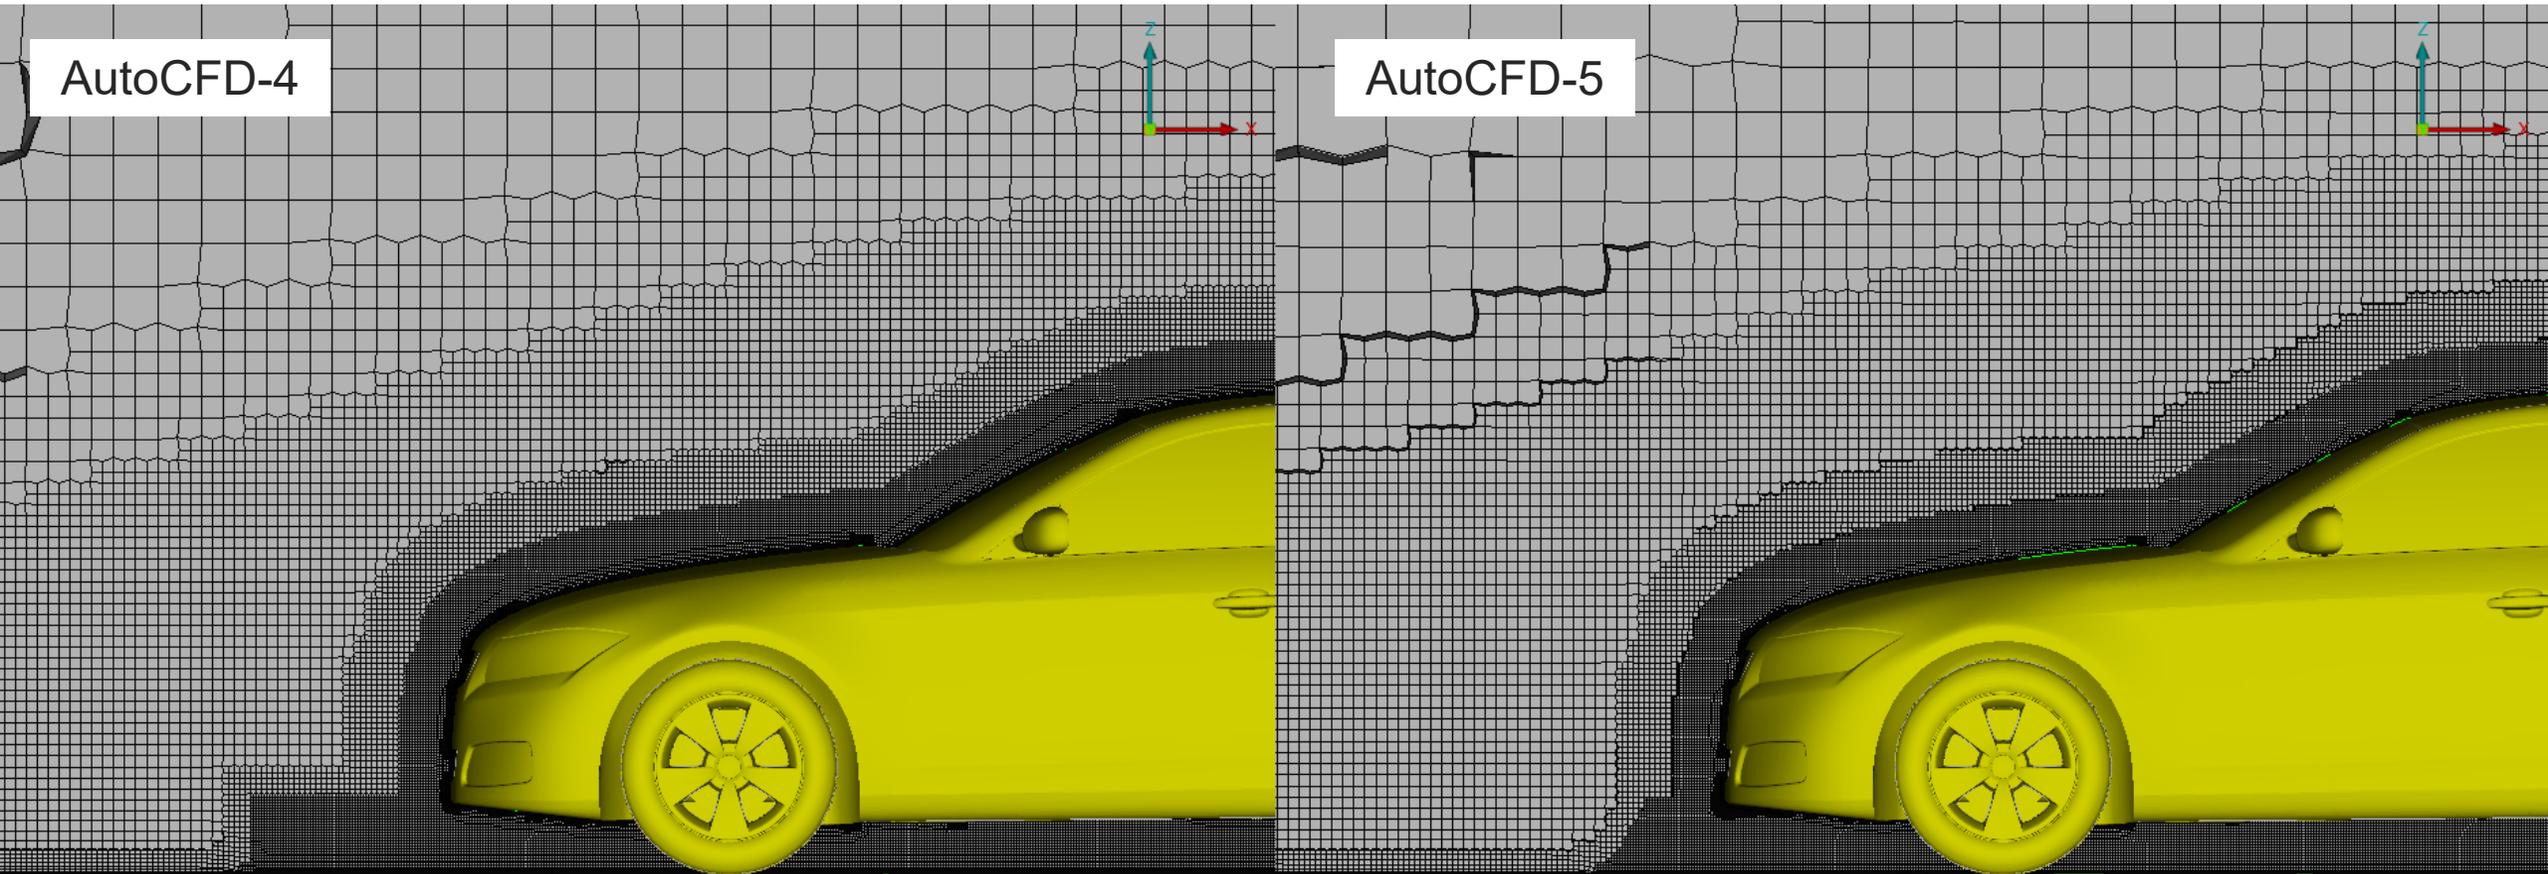

AutoCFD-4

AutoCFD-5

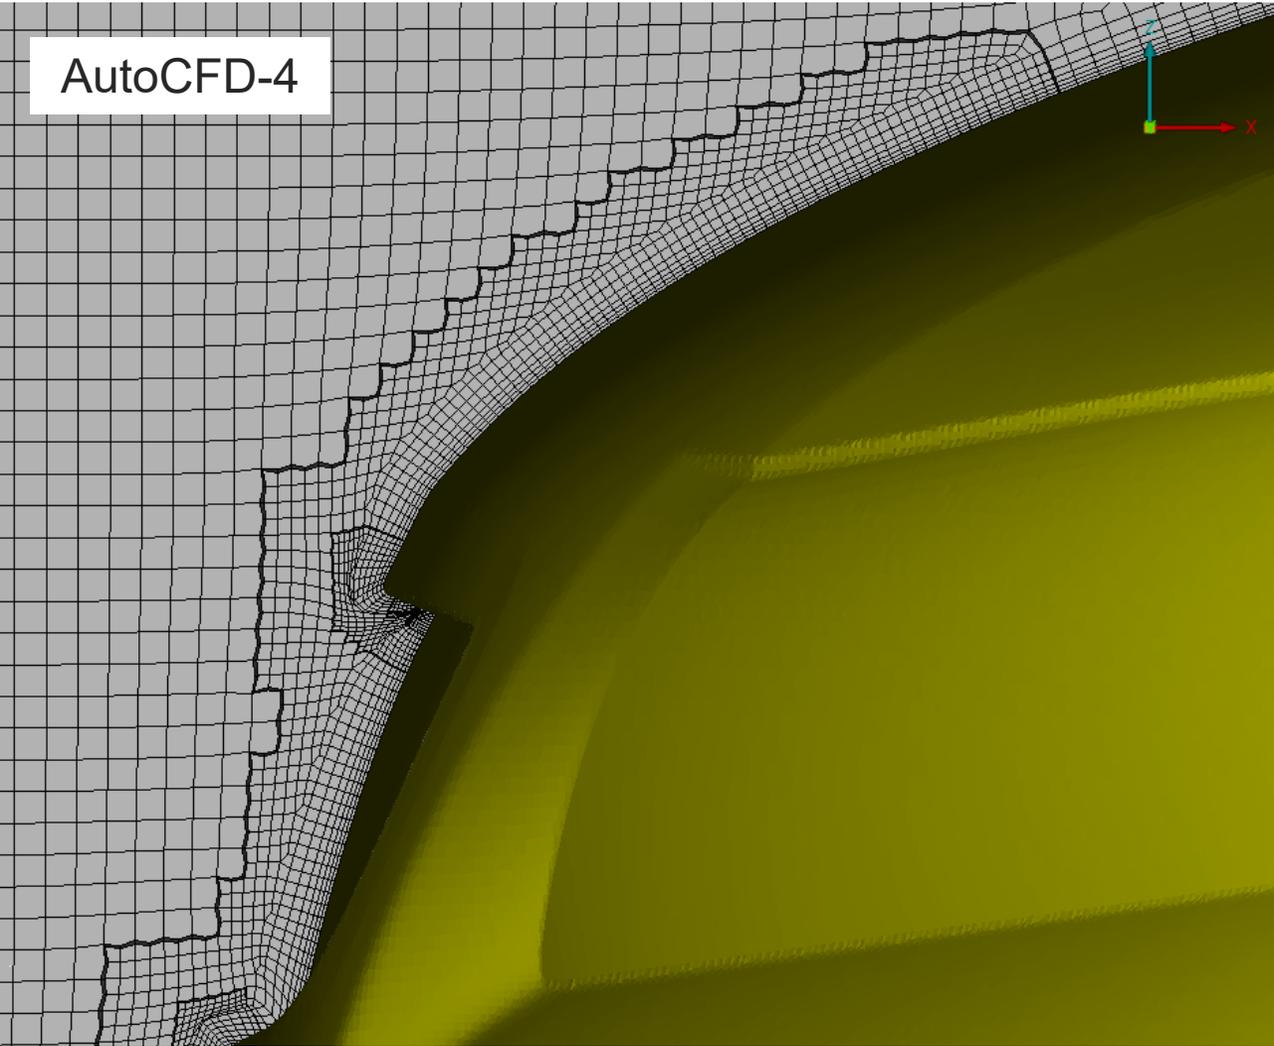

# Volume mesh – small reduction of upstream lower refinement area

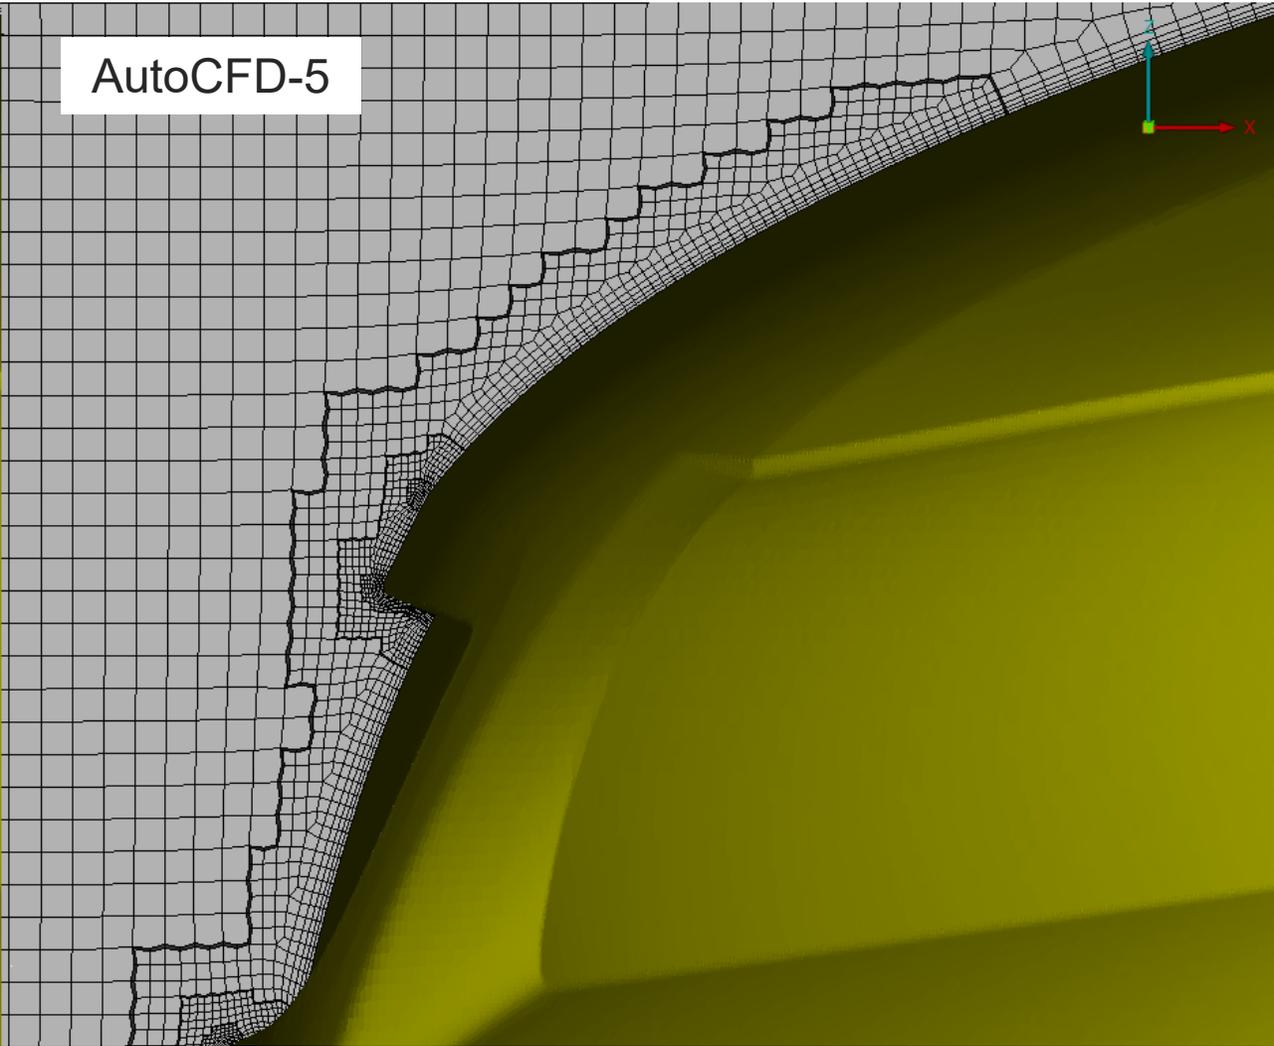

# Volume mesh – reduction of N layers from 7 to 5

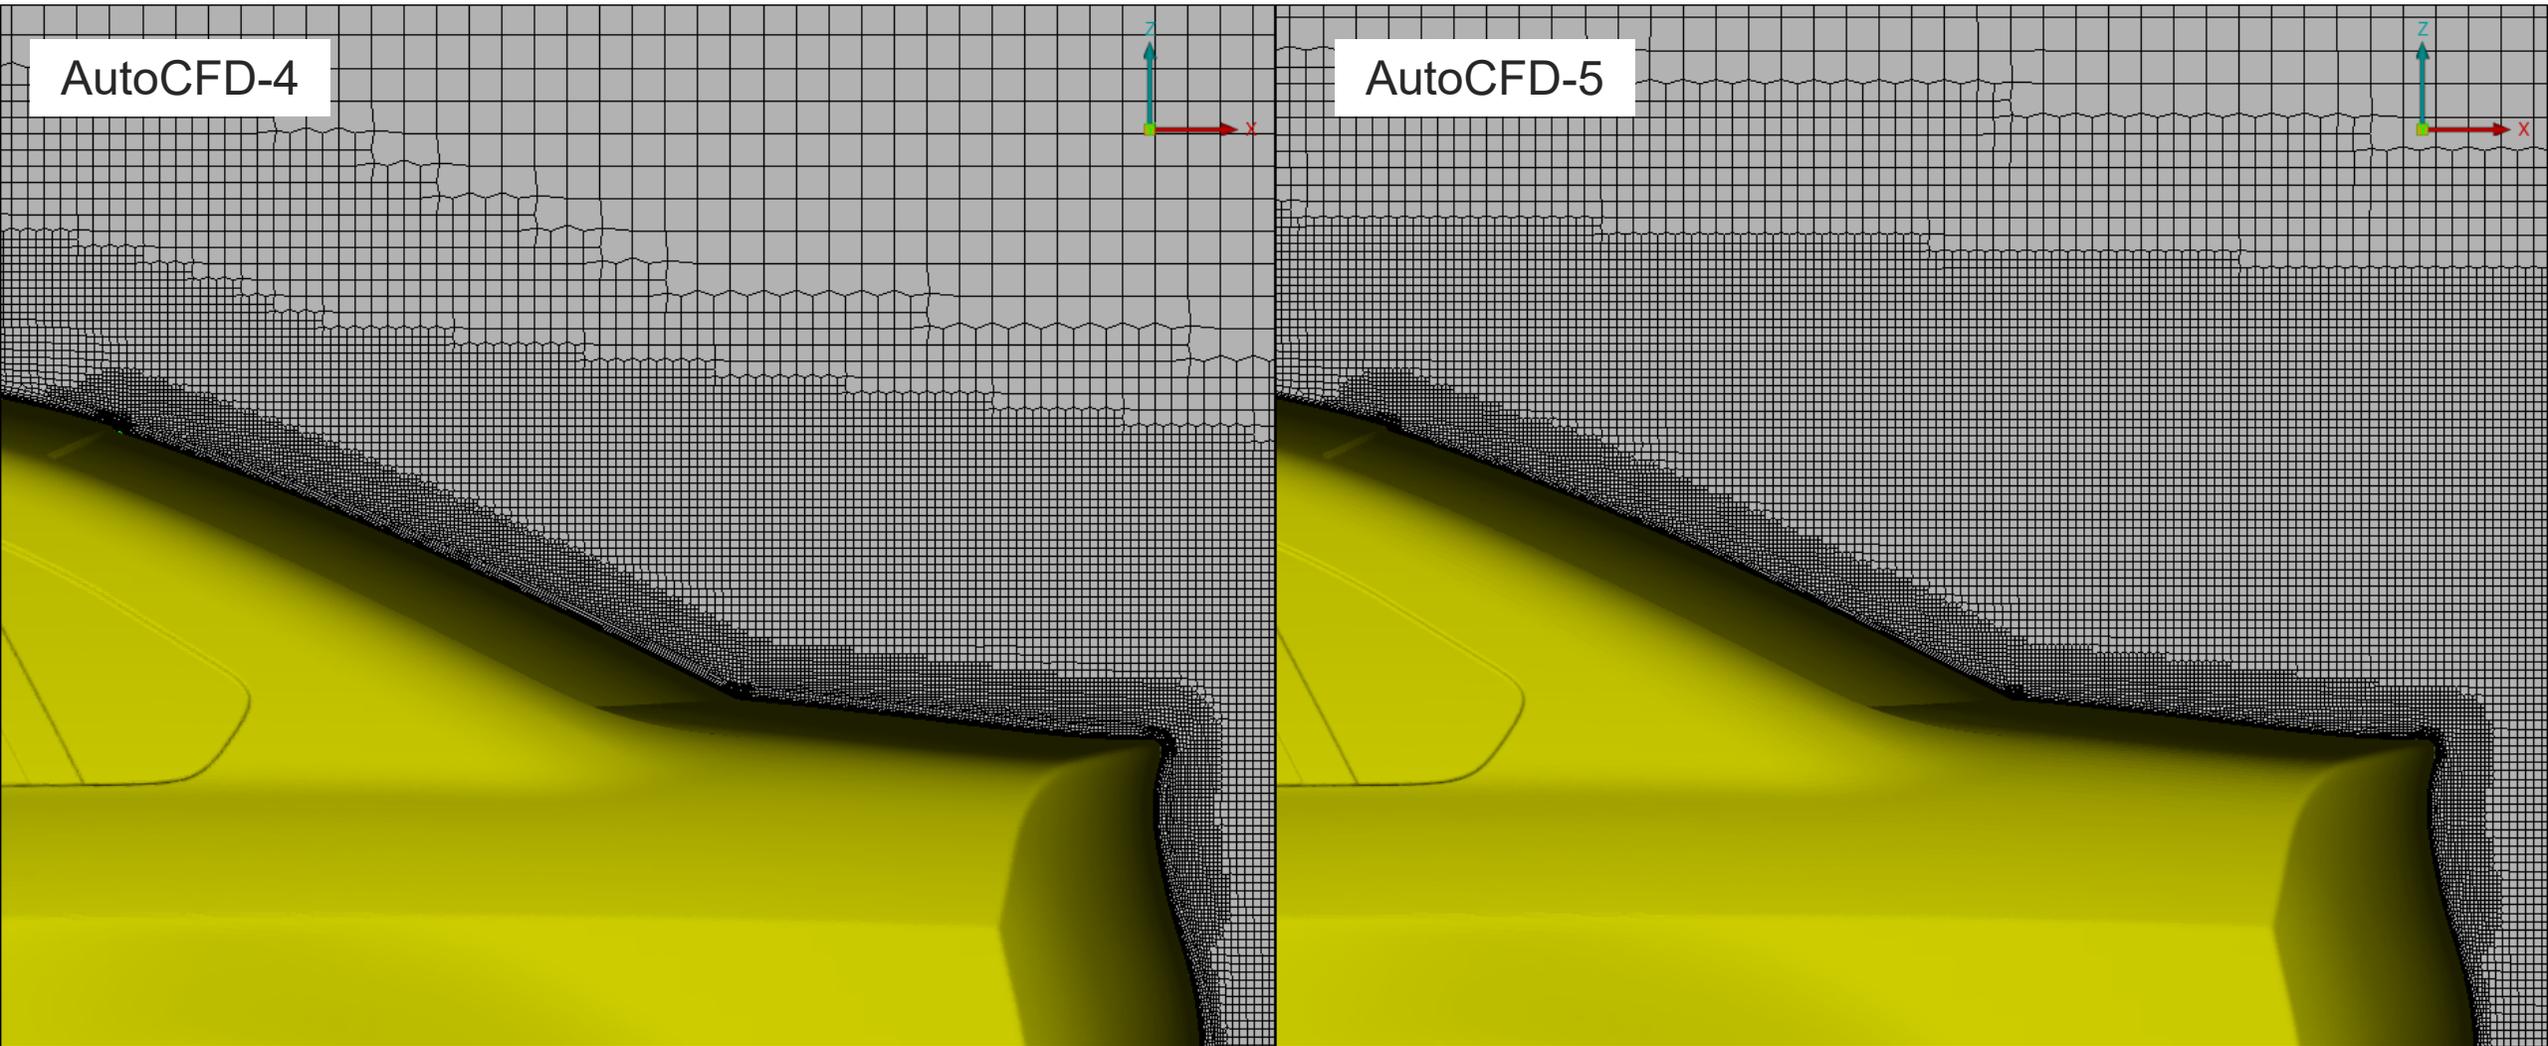

AutoCFD-4

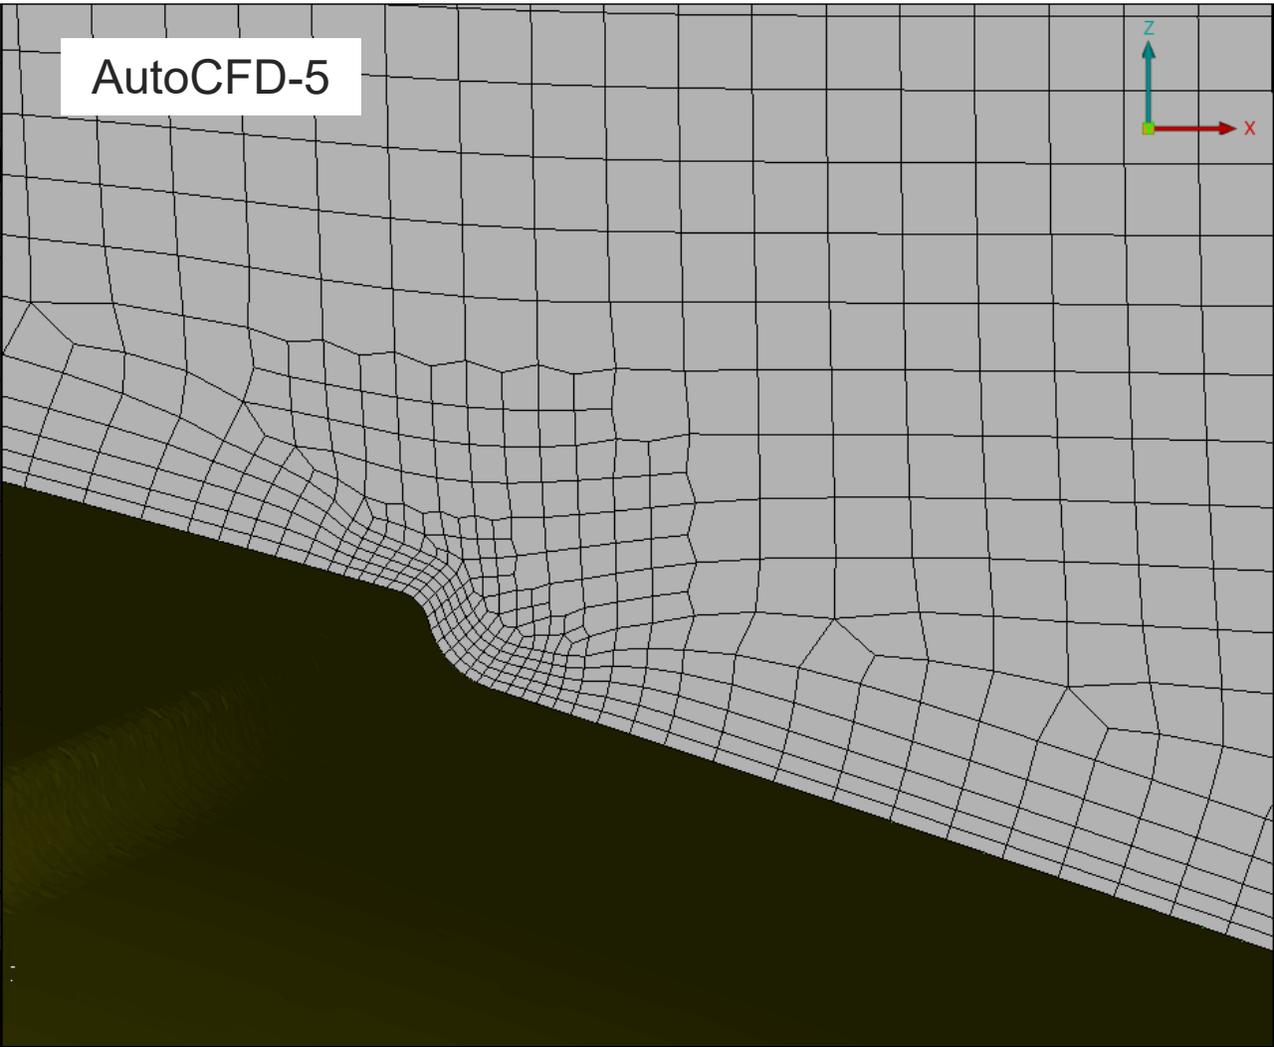

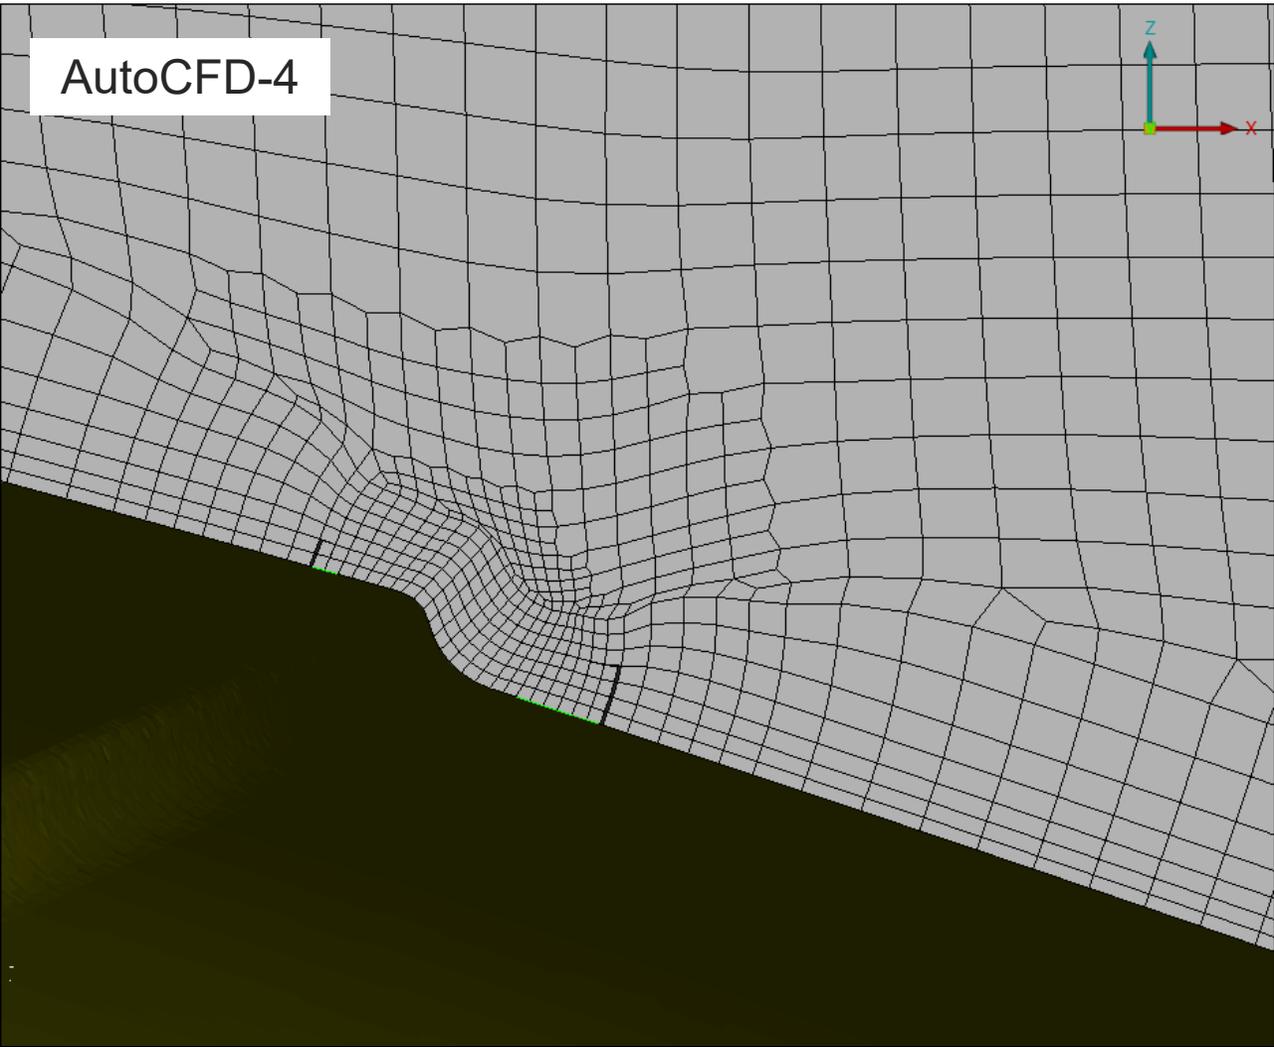

AutoCFD-5

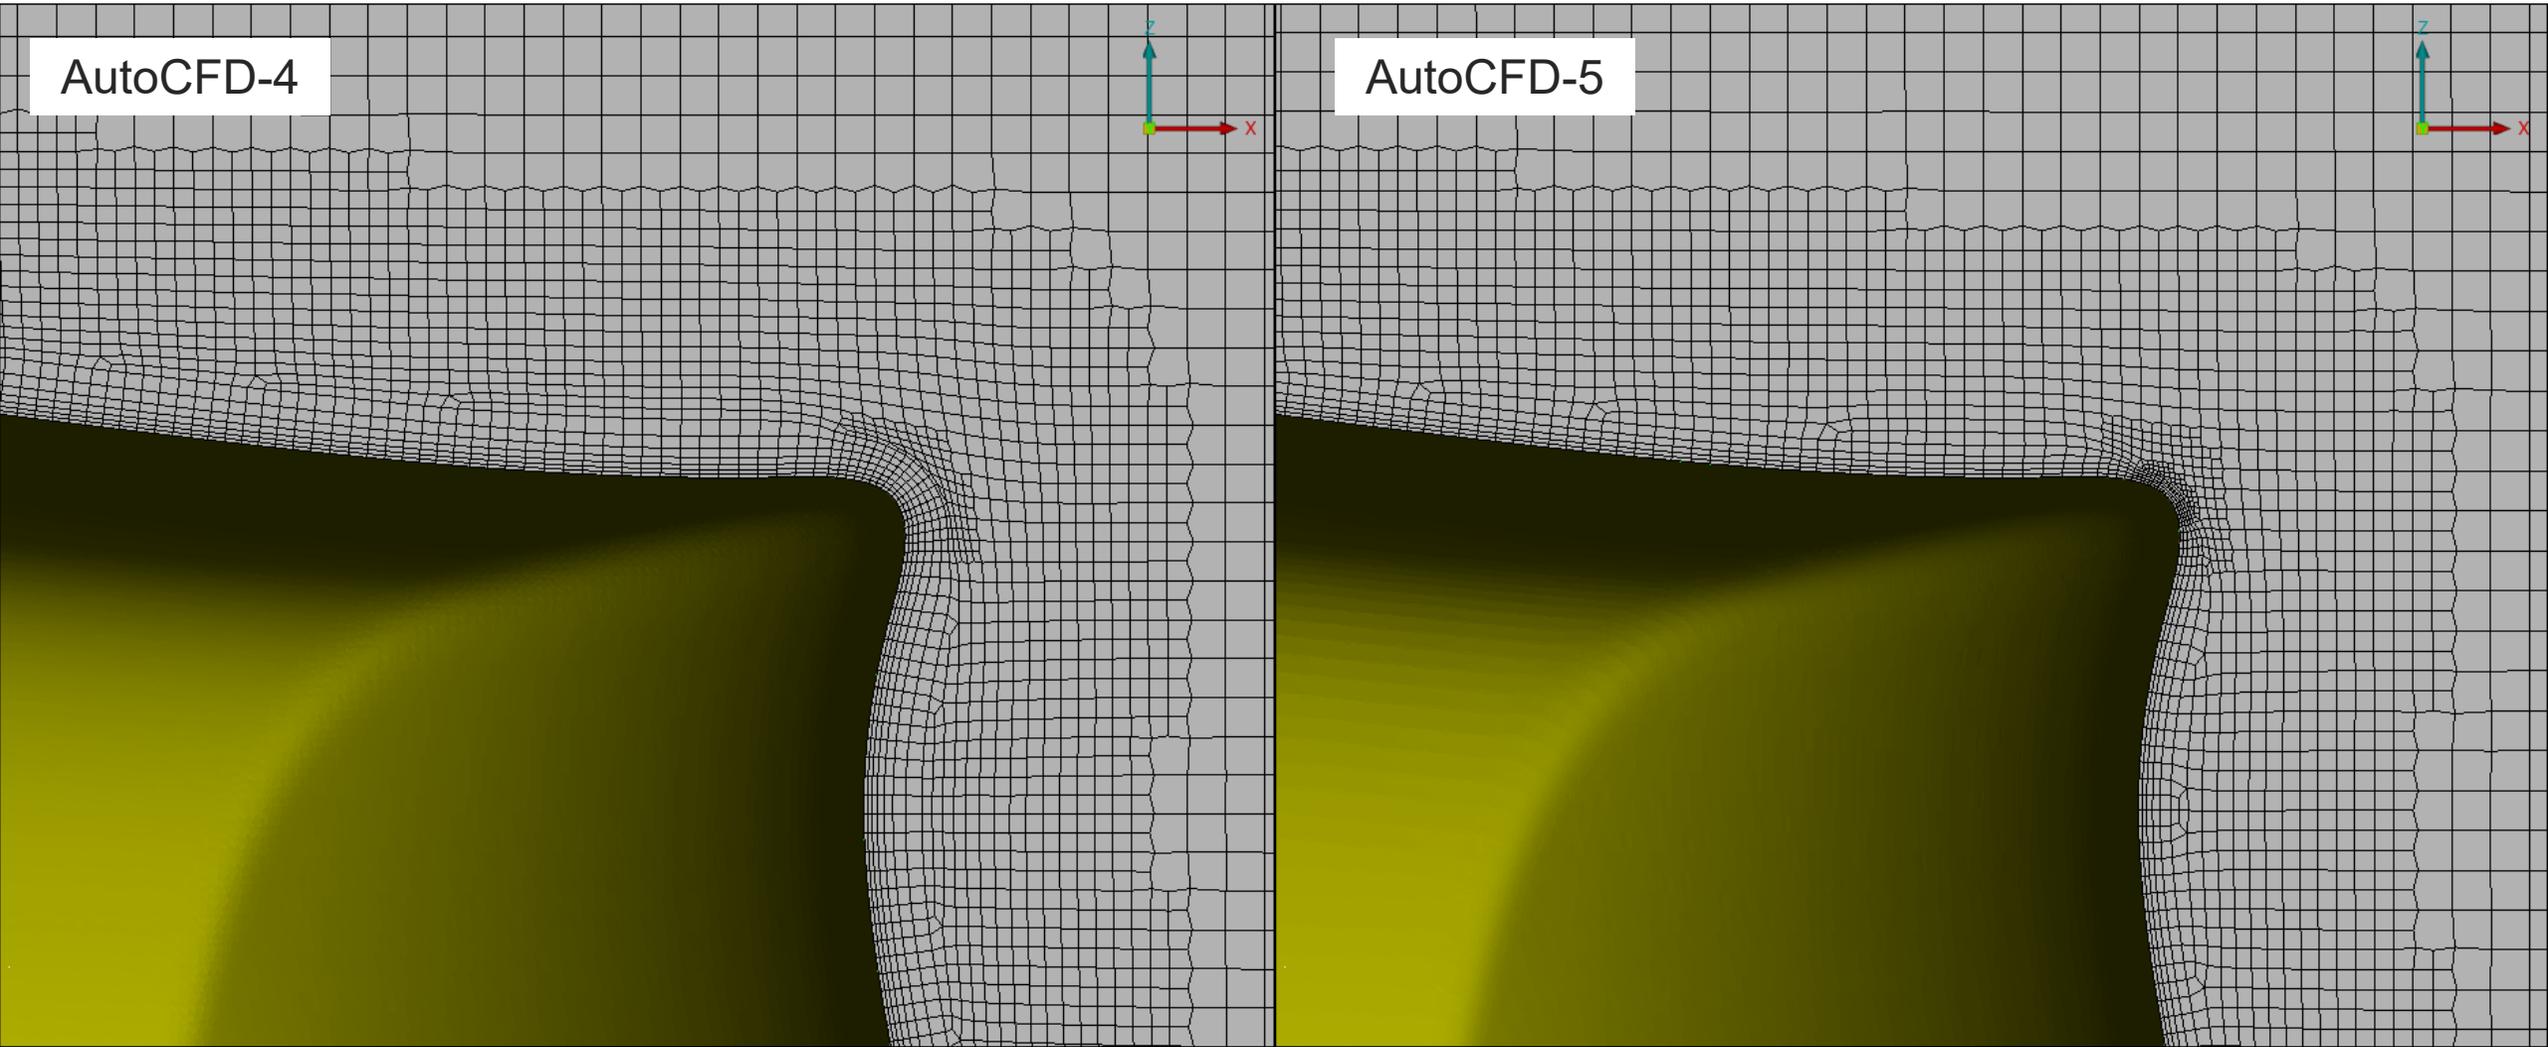

# Volume mesh – reduction of N layers from 7 to 5

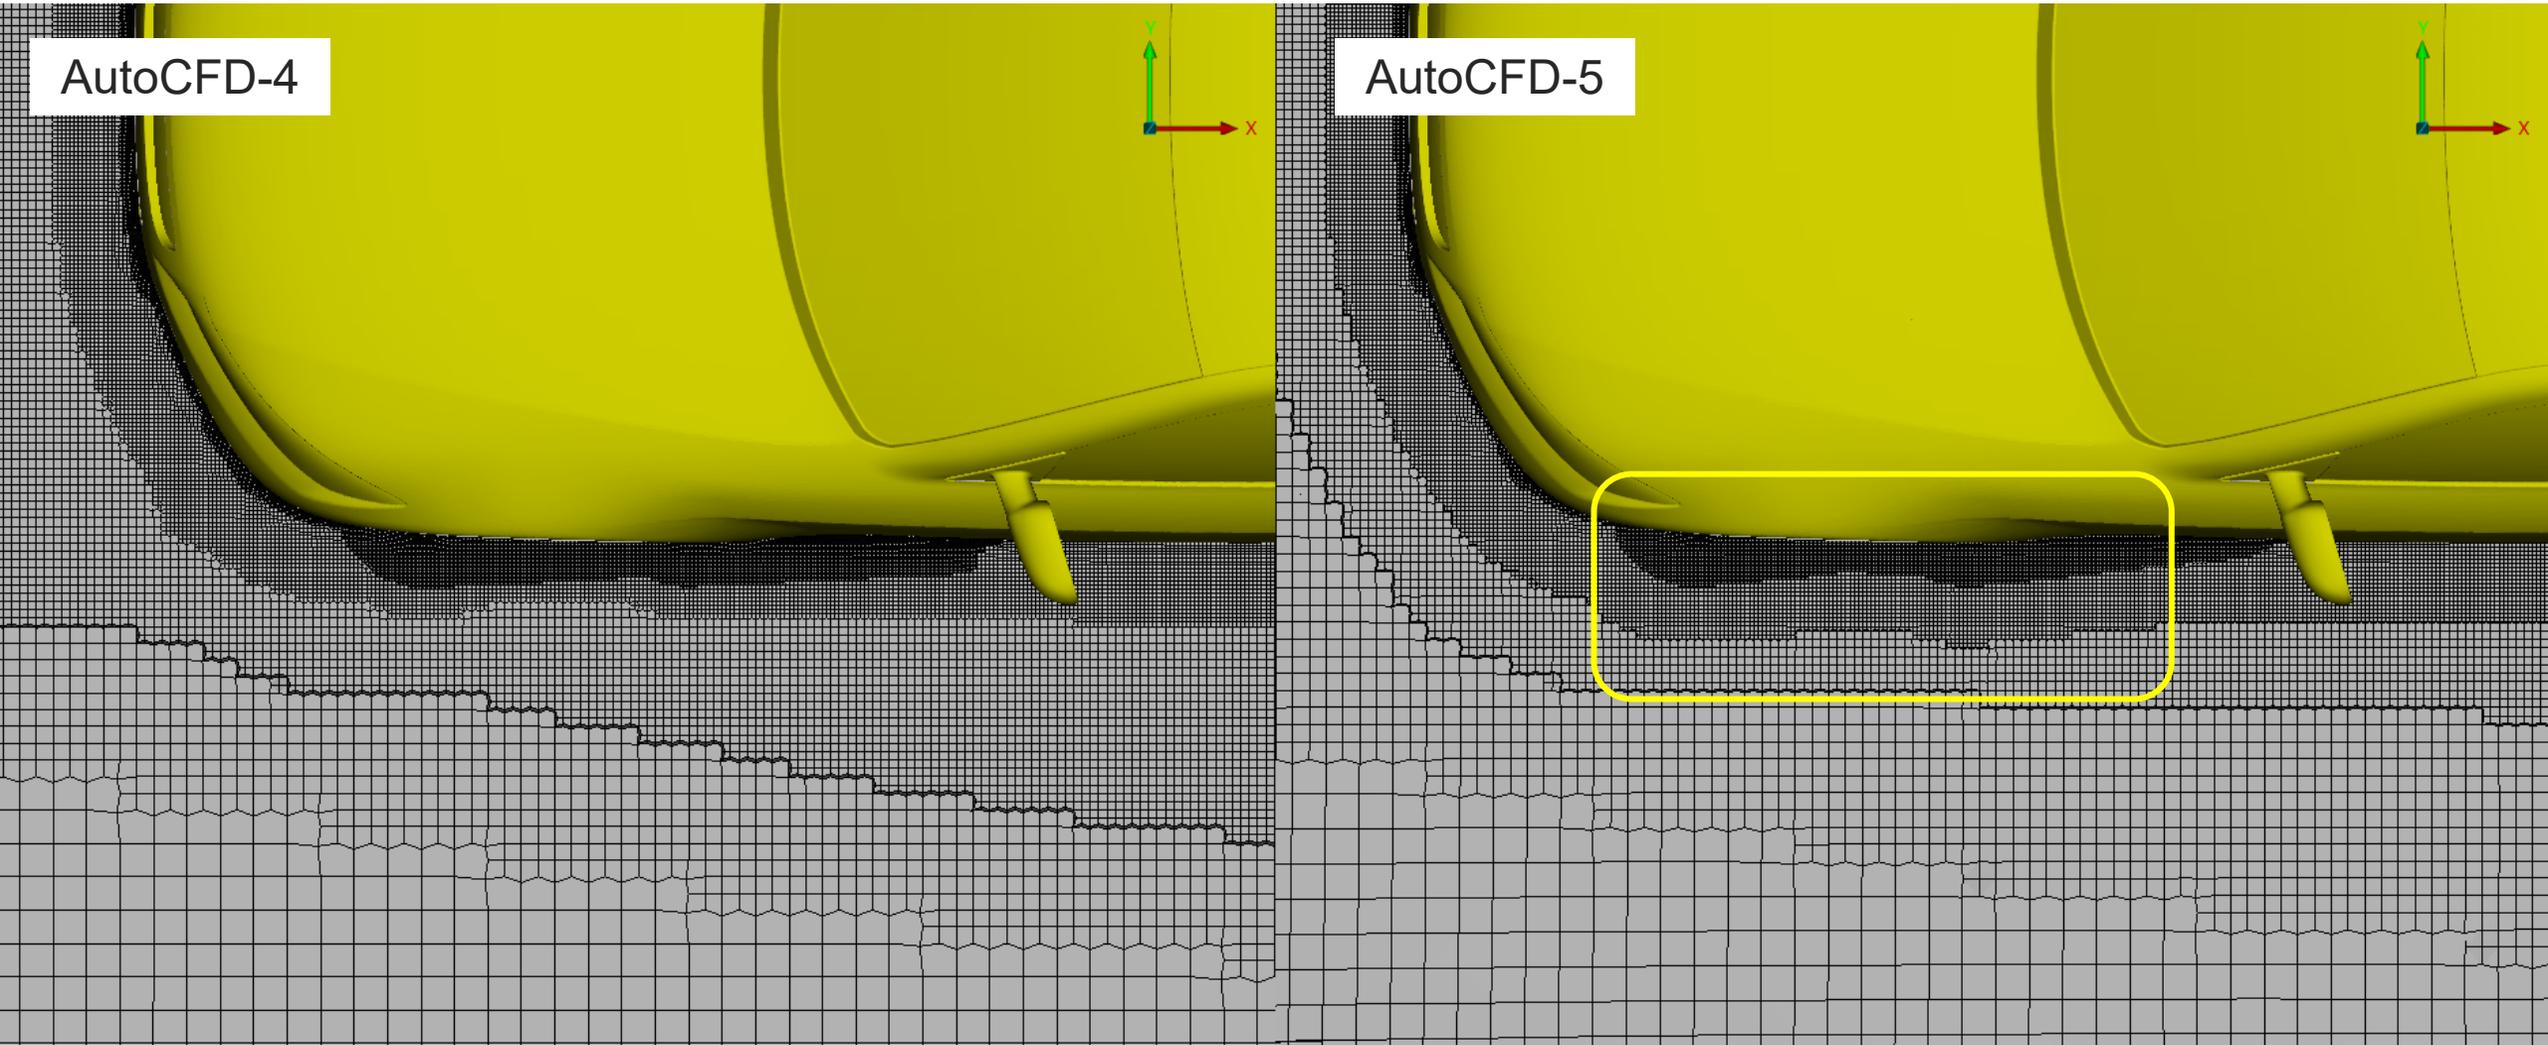

# Volume mesh – reduction of N layers from 7 to 5

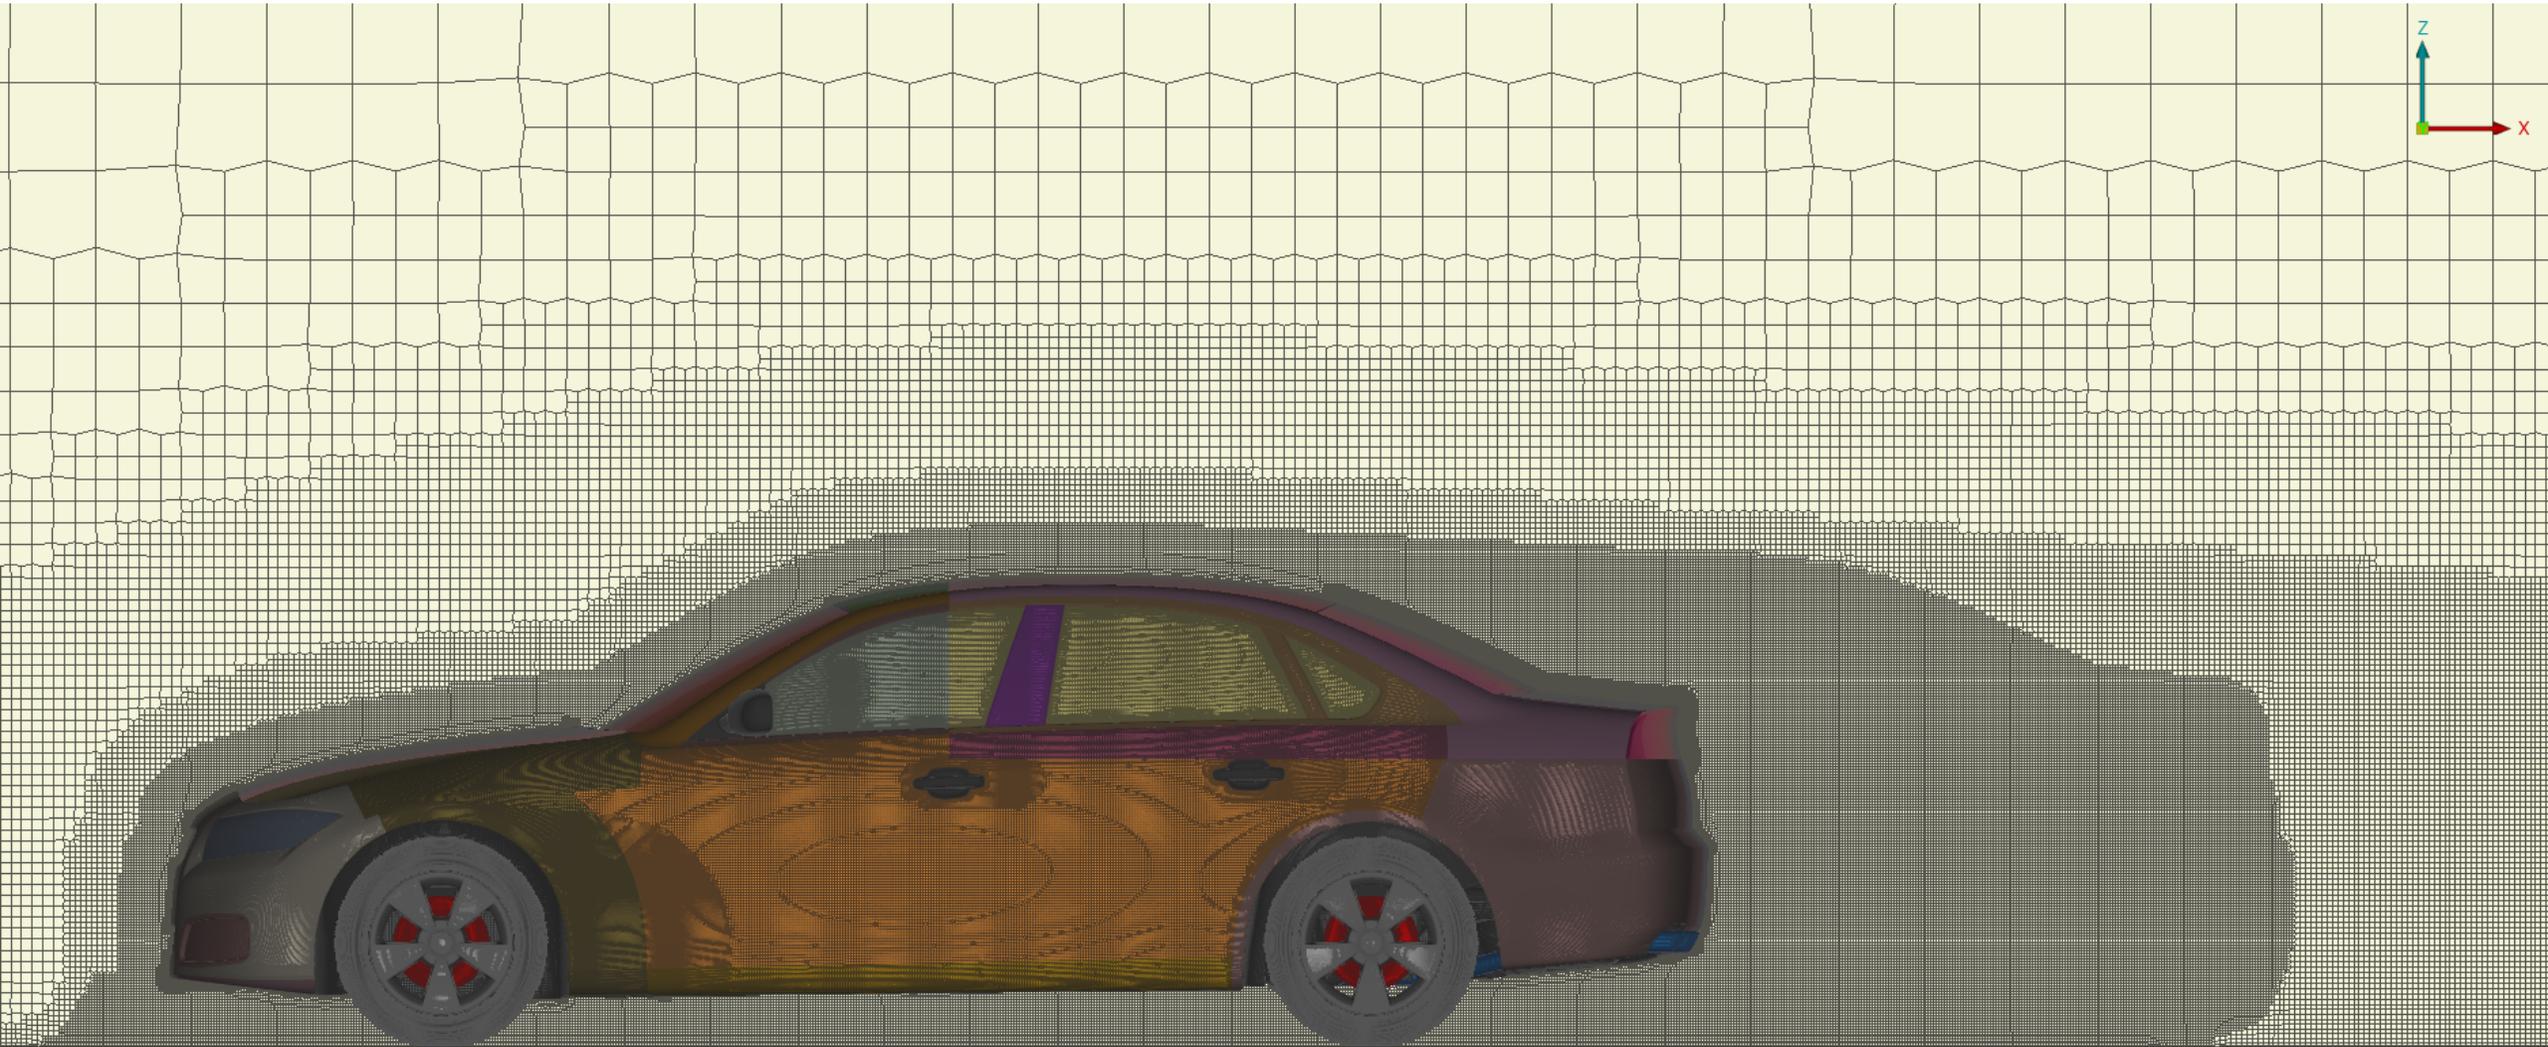

# Volume mesh – removal of offset refinement and finer curvature

# Volume mesh – widening of refinement near front wheel

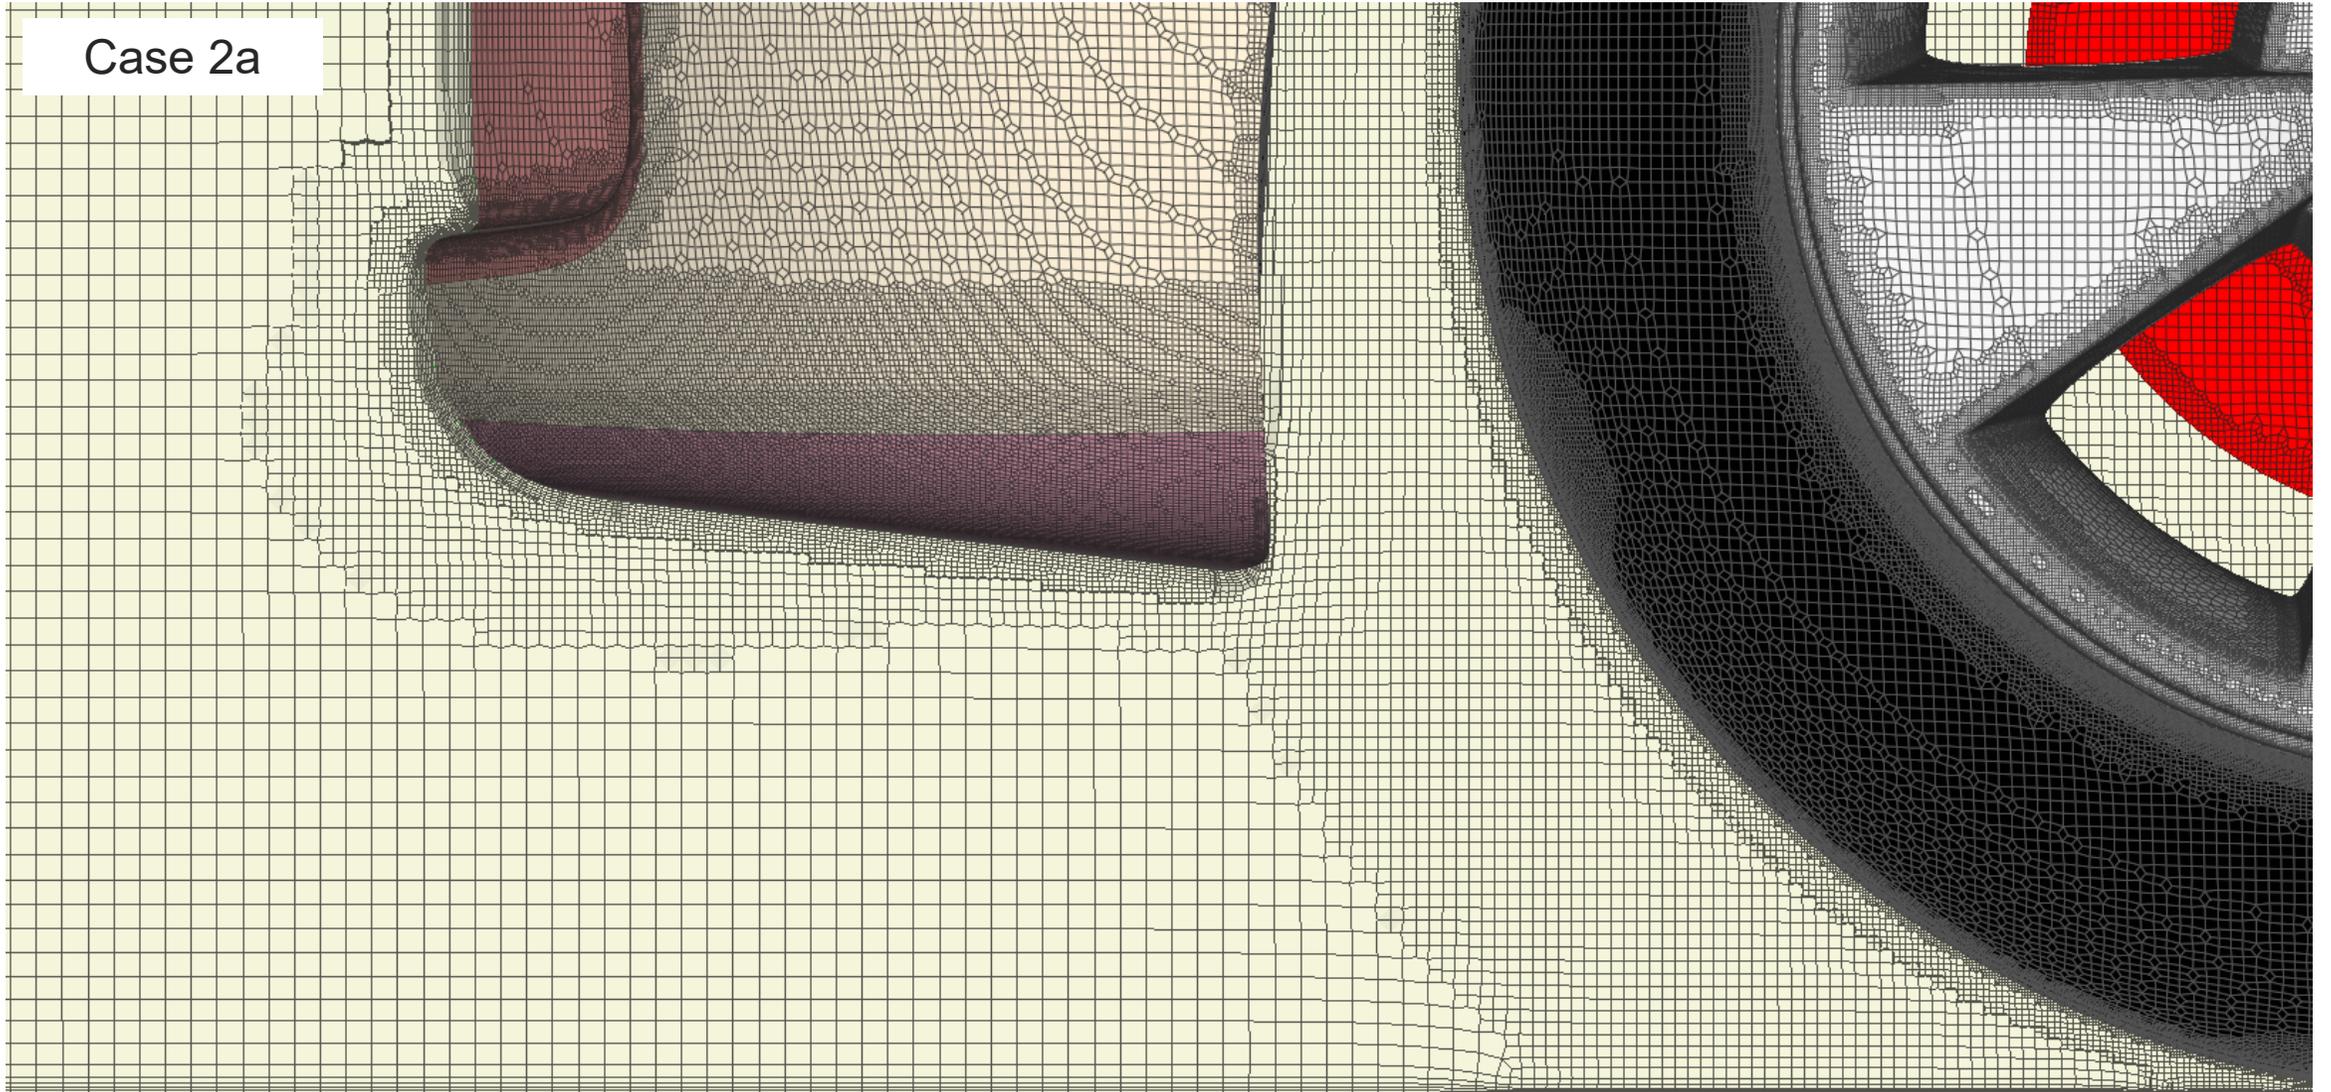

# AutoCFD5 – Notchback baseline

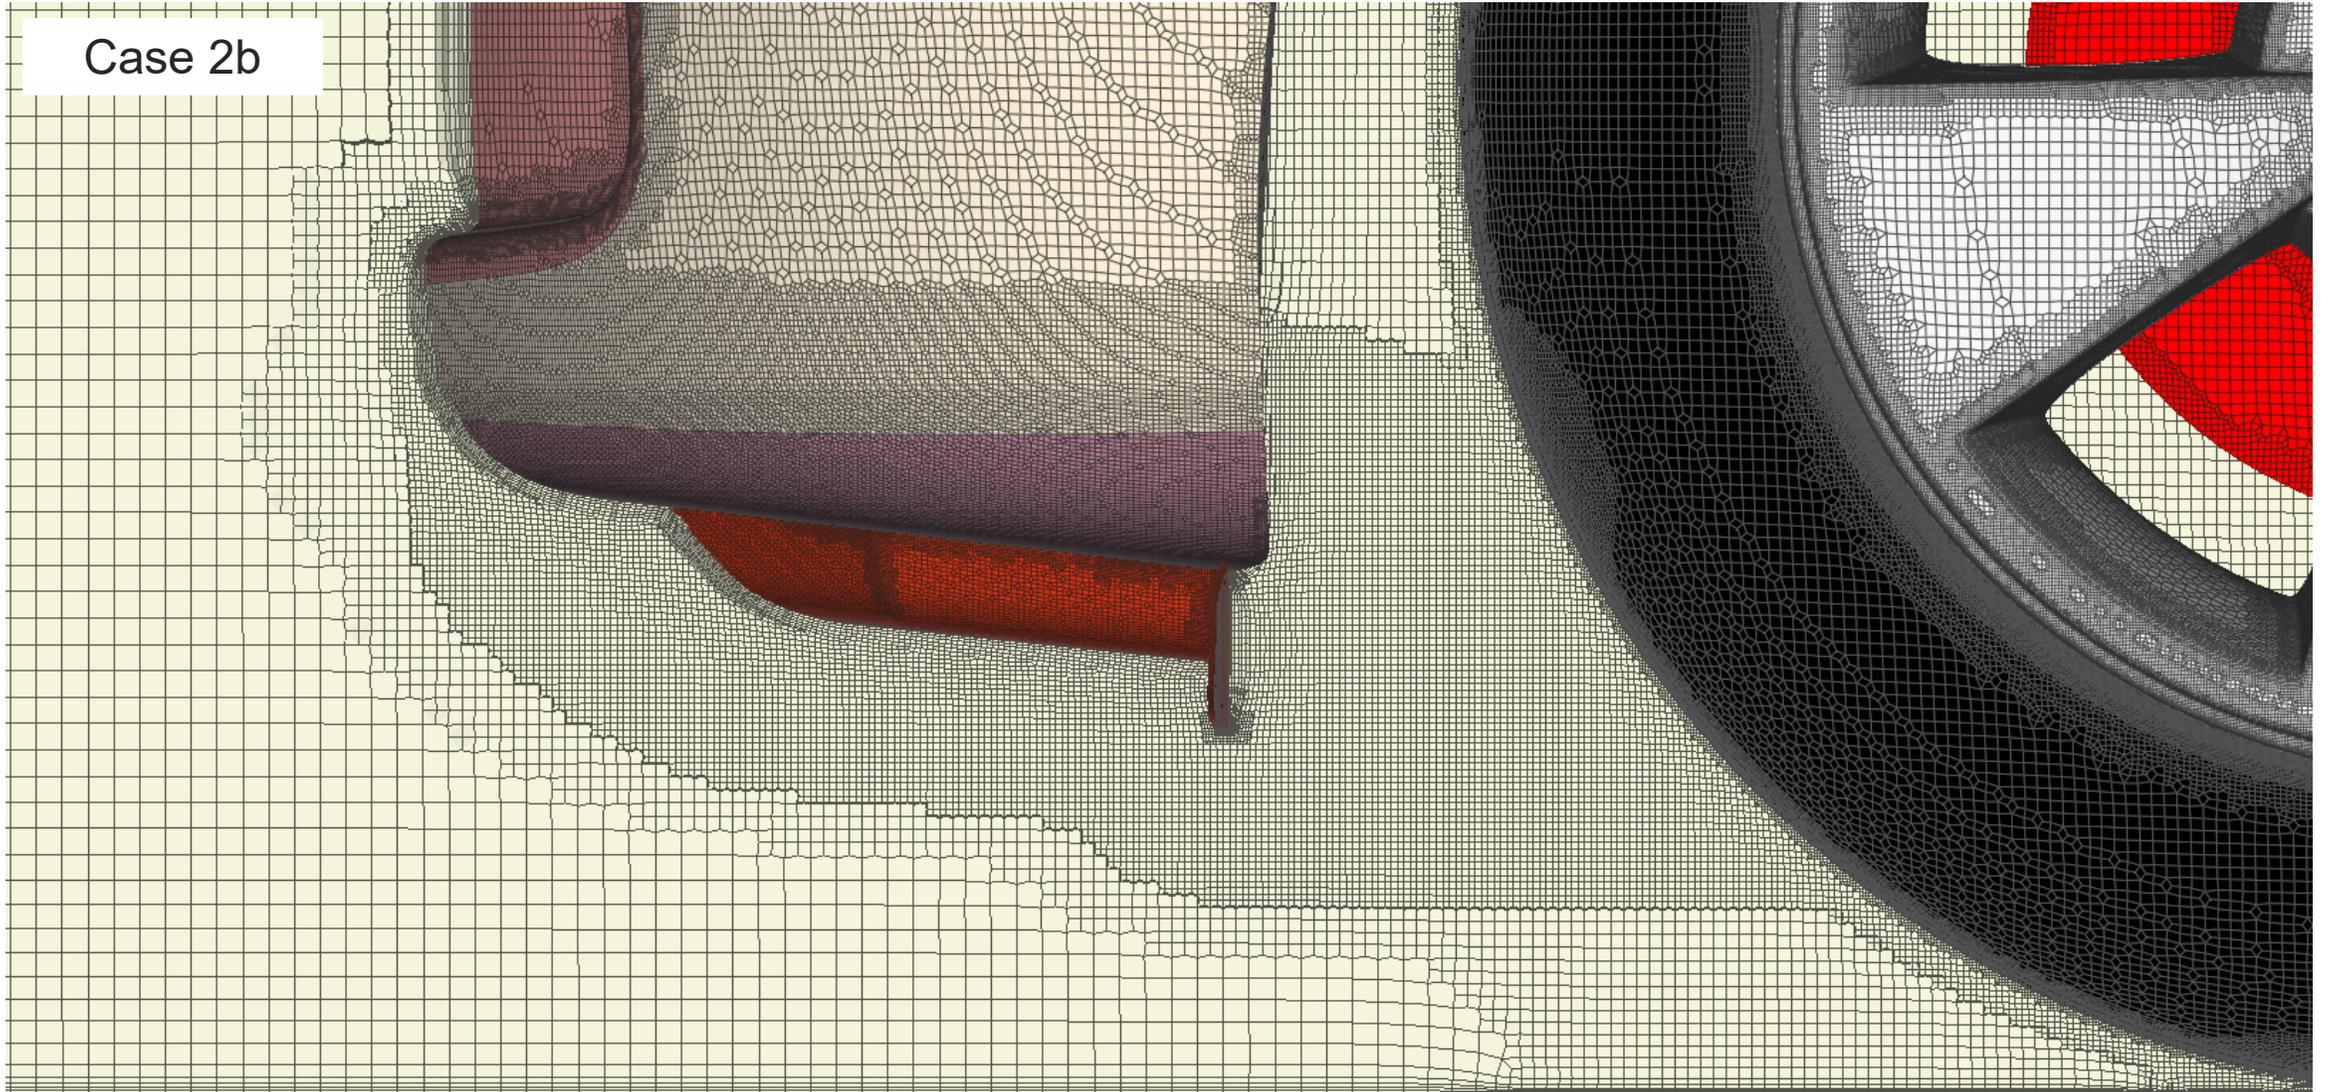

# Volume mesh – consistency between variants

Case 2a

# Volume mesh – consistency between variants

Case 2b

# Summary of new meshes available for download for AutoCFD-5

All files are in meters

- Volume meshes ready to run in the following formats:

	OpenFOAM	Fluent	CGNS
Case 2a – Notchback baseline	✓	✓	✓
Case 2b – Notchback with deflectors	✓	✓	✓

Note: Check the PID names if you are using previous setups, as there have been some renamings.

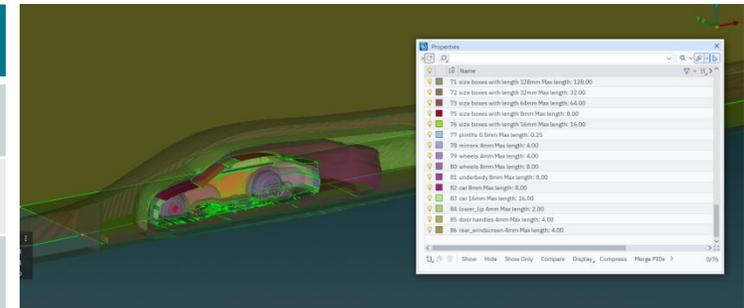

- Model geometries available in STL format together with 3D descriptions of refinement zones in space. Each iso-surface is named according to the max length it imposes

## Model Geometries

DrivAer Notchback baseline  
Additional front wheel deflectors

## Refinement Zones

DrivAer Notchback baseline  
Refinement zone of wheel deflectors
